

THE MARK TWAIN TRANSMISSION PROJECT

Helicopter Construction Begins Soon

Beginning in April, the Mark Twain Transmission Project team will start using helicopters to string transmission lines along the project route. Utilizing helicopters allows our contract partners to perform work more efficiently and to minimize property damage.

We encourage motorists who notice the helicopter work to:

- Focus on the road.
- Maintain a safe speed.
- Refrain from taking photos while driving.
- Keep a safe distance from crews.

Thank you for your cooperation as our crews complete this important project, which will ensure greater reliability, economic growth and improved access to renewable energy for the people of northeast Missouri and the greater region.
