

Talking points for a secure jobsite.

1. Mobile Mini's (Lock Boxes) will be utilized to store cable, tools and supplies at job sites.
2. Whenever possible a truck, bobcat or backhoe will be parked in front of the rear tractor trailer and/or lock box doors to prevent unauthorized entry.
3. All cable, equipment, tools etc... **must** be secured in the trailer or lock boxes.
4. **Remove all equipment** (i.e. hardhats, radios, tools, laptops...) whether Ameren's or personal from all vehicles on site and properly secure them.
5. **Use the locks** that come with virtually all equipment and machinery, and secure tools in a locked area or compartment. That may seem obvious, but people can easily forget security practices
6. Enforcer Locks **shall be used** on the rear of tractor trailers and/or lock boxes.
7. Contractors **shall not** remove scrap metal from any Ameren site.
8. Ameren will prosecute anyone caught stealing, removing or in unauthorized possession of Ameren property.
9. Anyone caught stealing, removing or in unauthorized possession of, Ameren property will be permanently barred from **all** Ameren sites and **all** Ameren projects.
10. Local law enforcement officers shall be notified of each location where a job site has been established and will routinely patrol same.

11. Scrap yard dealers/owners have been contacted and instructed to contact law enforcement when someone attempts to sell them copper.
12. There is legislation underway to change the law to require photo identification from everyone selling metal to a scrap yard
13. Ameren will Issue rewards for information leading to arrests for theft of copper and any Ameren property.
14. Inventory Management - keep an accurate stock in tools, equipment, and material
15. **Don't advertise** what materials you have on the site, plain and simple. For example, materials such lumber should be stacked neatly, out of sight and covered, as well as banded with aluminum ties or bungee type cords. Better yet, park the company bulldozer or truck by the lumber, which would require a thief to move the machinery before stealing any of that wood. Remember, any Joe with a pickup truck can drive up and load away your supplies if you make it easy enough for them, and with the price of materials rising, it pays to be careful.
16. **Signs are also deterrents.** Post "No Trespassing" signs at the site.
17. **Consider tagging and automatic identification technologies** for tools and small equipment in the construction field as organizations gain the ability to protect, track and locate their assets.
18. **Don't forget to secure computers**, laptops, copiers and other items. There are a variety of lockdown devices on the market that are inexpensive and easy to attach to laptops, PDAs and other precious

assets. These can even prevent unauthorized users from logging on to your computers.

19. **Record license plate info and vehicle description**, of any vehicles that come on site during the day.
20. **Report any/all** suspicious activity to an Ameren supervisor. Such as person(s) entering the site inadvertently, inquiring about the project etc...
