# APPENDIX E LABORATORY ANALYTICAL REPORTS (METHOD 325B)

eurofins | Air Toxics

1/5/2022
Mr. Brian O'Shea
ERM Northern Division (formerly ERM-North Central)
125 South Wacker
Suite 2500
Chicago IL 60606

Project Name: Champaign 5th Street
Project #:
Workorder #: 2112414

Dear Mr. Brian O'Shea

The following report includes the data for the above referenced project for sample(s) received on 12/16/2021 at Eurofins Air Toxics LLC.

The data and associated QC analyzed by EPA Method 325B are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics LLC. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kathleen Kaneko at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kathleen Kaneko

**LABORATORY NARRATIVE**
**ATM EPA 325B**
**ERM Northern Division (formerly ERM-North Central)**
**Workorder# 2112414**

Five Carbopack X CAMSCO samples were received on December 16, 2021. The laboratory performed the analysis via EPA Method 325B using GC/MS in the full scan mode.

The mass of each target compound adsorbed by the sampler was converted to units of concentration using the sample deployment time and the uptake rate for each VOC. Uptake rates are adjusted for local conditions and concentrations are reported based on normal ambient temperature and pressure conditions (25 deg C and 760 mm Hg) following the required calculations in EPA Method 325B. These adjustments are reflected in the dilution factor.

## Receiving Notes

There were no receiving discrepancies.

## Analytical Notes

There were no analytical discrepancies.

## Definition of Data Qualifying Flags

The following qualifiers may have been used on the data analysis sheets and indicate as follows:

B - Compound present in field blank(s) greater than 1/3 the compliance limit or measured target analyte (background subtraction not performed).
J - Estimated value - analyte detected between the Method Detection Limit and Reporting Limit.
E - Exceeds instrument calibration range.
S - Saturated peak.
Q - Exceeds quality control limits.
U - Compound analyzed for but not detected above the MDL value.
I - Internal Standard recovery outside acceptance limits
P - Field Duplicate(s) exceed 30%RPD
Pc- Field Duplicate(s) exceed 30%RPD, concentrations of sample and/or its duplicate less than 2 times reporting limit.
Pl - Field Duplicate(s) exceed 30%RPD, lab error noted.
L - Recovery of bracketing CCV(s) exceeded acceptance limits.
H - Sample analyzed outside of method hold time.
D - Sample duration outside 14+/-1 days
Fe - Field Error or discrepancy
Te - Tube Error or discrepancy
CN - See case narrative explanation.

File extensions may have been used on the data analysis sheets and indicates as follows:
a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

Dear Mr. Brian O'Shea

The following report includes the data for the above referenced project for sample(s) received on 1/3/2022 at Eurofins Air Toxics LLC.

The data and associated QC analyzed by EPA Method 325B are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics LLC. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kathleen Kaneko at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kathleen Kaneko

**LABORATORY NARRATIVE**
**ATM EPA 325B**
**ERM Northern Division (formerly ERM-North Central)**
**Workorder# 2201060**

Five Carbopack X CAMSCO samples were received on January 03, 2022. The laboratory performed the analysis via EPA Method 325B using GC/MS in the full scan mode.

The mass of each target compound adsorbed by the sampler was converted to units of concentration using the sample deployment time and the uptake rate for each VOC. Uptake rates are adjusted for local conditions and concentrations are reported based on normal ambient temperature and pressure conditions (25 deg C and 760 mm Hg) following the required calculations in EPA Method 325B. These adjustments are reflected in the dilution factor.

## Receiving Notes

There were no receiving discrepancies.

## Analytical Notes

The bracketing continuing calibration verification (CCV) for all samples recovered above the method limits of 70-130%. However, recovery was high and associated samples were below the method detection limit. Target compound non-detects in samples that are associated with high bias in QC analyses have not been flagged.

## Definition of Data Qualifying Flags

The following qualifiers may have been used on the data analysis sheets and indicate as follows:

B - Compound present in field blank(s) greater than 1/3 the compliance limit or measured target analyte (background subtraction not performed).
J - Estimated value - analyte detected between the Method Detection Limit and Reporting Limit.
E - Exceeds instrument calibration range.
S - Saturated peak.
Q - Exceeds quality control limits.
U - Compound analyzed for but not detected above the MDL value.
I - Internal Standard recovery outside acceptance limits
P - Field Duplicate(s) exceed 30%RPD
Pc- Field Duplicate(s) exceed 30%RPD, concentrations of sample and/or its duplicate less than 2 times reporting limit.
Pl - Field Duplicate(s) exceed 30%RPD, lab error noted.
L - Recovery of bracketing CCV(s) exceeded acceptance limits.
H - Sample analyzed outside of method hold time.
D - Sample duration outside 14+/-1 days
Fe - Field Error or discrepancy
Te - Tube Error or discrepancy
CN - See case narrative explanation.

File extensions may have been used on the data analysis sheets and indicates as follows:
a-File was requantified

b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

Mr. Brian O'Shea
ERM Northern Division (formerly ERM-North Central)
125 South Wacker
Suite 2500
Chicago IL 60606

Project Name: Ameren Champaign
Project #:
Workorder #: 2201224

Dear Mr. Brian O'Shea

The following report includes the data for the above referenced project for sample(s) received on 1/13/2022 at Eurofins Air Toxics LLC.

The data and associated QC analyzed by EPA Method 325B are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics LLC. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kathleen Kaneko at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kathleen Kaneko

Project Manager

**LABORATORY NARRATIVE**
**ATM EPA 325B**
**ERM Northern Division (formerly ERM-North Central)**
**Workorder# 2201224**

Seven Carbopack X CAMSCO samples were received on January 13, 2022. The laboratory performed the analysis via EPA Method 325B using GC/MS in the full scan mode.

The mass of each target compound adsorbed by the sampler was converted to units of concentration using the sample deployment time and the uptake rate for each VOC. Uptake rates are adjusted for local conditions and concentrations are reported based on normal ambient temperature and pressure conditions (25 deg C and 760 mm Hg) following the required calculations in EPA Method 325B. These adjustments are reflected in the dilution factor.

## Receiving Notes

There were no receiving discrepancies.

## Analytical Notes

There were no analytical discrepancies.

## Definition of Data Qualifying Flags

The following qualifiers may have been used on the data analysis sheets and indicate as follows:

B - Compound present in field blank(s) greater than 1/3 the compliance limit or measured target analyte (background subtraction not performed).
J - Estimated value - analyte detected between the Method Detection Limit and Reporting Limit.
E - Exceeds instrument calibration range.
S - Saturated peak.
Q - Exceeds quality control limits.
U - Compound analyzed for but not detected above the MDL value.
I - Internal Standard recovery outside acceptance limits
P - Field Duplicate(s) exceed 30%RPD
Pc- Field Duplicate(s) exceed 30%RPD, concentrations of sample and/or its duplicate less than 2 times reporting limit.
Pl - Field Duplicate(s) exceed 30%RPD, lab error noted.
L - Recovery of bracketing CCV(s) exceeded acceptance limits.
H - Sample analyzed outside of method hold time.
D - Sample duration outside 14+/-1 days
Fe - Field Error or discrepancy
Te - Tube Error or discrepancy
CN - See case narrative explanation.

File extensions may have been used on the data analysis sheets and indicates as follows:
a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

Project Name: Champaign 5th St.
Project #:
Workorder #: 2201592

Dear Mr. Brian O'Shea

The following report includes the data for the above referenced project for sample(s) received on 1/27/2022 at Eurofins Air Toxics LLC.

The data and associated QC analyzed by EPA Method 325B are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics LLC. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kathleen Kaneko at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kathleen Kaneko

**LABORATORY NARRATIVE**
**ATM EPA 325B**
**ERM Northern Division (formerly ERM-North Central)**
**Workorder# 2201592**

Six Carbopack X CAMSCO samples were received on January 27, 2022. The laboratory performed the analysis via EPA Method 325B using GC/MS in the full scan mode.

The mass of each target compound adsorbed by the sampler was converted to units of concentration using the sample deployment time and the uptake rate for each VOC. Uptake rates are adjusted for local conditions and concentrations are reported based on normal ambient temperature and pressure conditions (25 deg C and 760 mm Hg) following the required calculations in EPA Method 325B. These adjustments are reflected in the dilution factor.

## Receiving Notes

There were no receiving discrepancies.

## Analytical Notes

There were no analytical discrepancies.

## Definition of Data Qualifying Flags

The following qualifiers may have been used on the data analysis sheets and indicate as follows:

B - Compound present in field blank(s) greater than 1/3 the compliance limit or measured target analyte (background subtraction not performed).
J - Estimated value - analyte detected between the Method Detection Limit and Reporting Limit.
E - Exceeds instrument calibration range.
S - Saturated peak.
Q - Exceeds quality control limits.
U - Compound analyzed for but not detected above the MDL value.
I - Internal Standard recovery outside acceptance limits
P - Field Duplicate(s) exceed 30%RPD
Pc- Field Duplicate(s) exceed 30%RPD, concentrations of sample and/or its duplicate less than 2 times reporting limit.
Pl - Field Duplicate(s) exceed 30%RPD, lab error noted.
L - Recovery of bracketing CCV(s) exceeded acceptance limits.
H - Sample analyzed outside of method hold time.
D - Sample duration outside 14+/-1 days
Fe - Field Error or discrepancy
Te - Tube Error or discrepancy
CN - See case narrative explanation.

File extensions may have been used on the data analysis sheets and indicates as follows:
a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

Dear Mr. Brian O'Shea

The following report includes the data for the above referenced project for sample(s) received on 2/10/2022 at Eurofins Air Toxics LLC.

The data and associated QC analyzed by EPA Method 325B are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics LLC. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kathleen Kaneko at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kathleen Kaneko

Mr. Brian O'Shea
ERM Northern Division (formerly ERM-North Central)
125 South Wacker
Suite 2500
Chicago IL 60606

Project Name: Champaign 5th St.
Project #:
Workorder #: 2202585

Dear Mr. Brian O'Shea

The following report includes the data for the above referenced project for sample(s) received on 2/24/2022 at Eurofins Air Toxics LLC.

The data and associated QC analyzed by EPA Method 325B are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics LLC. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kathleen Kaneko at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kathleen Kaneko

Project Manager

**LABORATORY NARRATIVE**
**ATM EPA 325B**
**ERM Northern Division (formerly ERM-North Central)**
**Workorder# 2202585**

Six Carbopack X CAMSCO samples were received on February 24, 2022. The laboratory performed the analysis via EPA Method 325B using GC/MS in the full scan mode.

The mass of each target compound adsorbed by the sampler was converted to units of concentration using the sample deployment time and the uptake rate for each VOC. Uptake rates are adjusted for local conditions and concentrations are reported based on normal ambient temperature and pressure conditions (25 deg C and 760 mm Hg) following the required calculations in EPA Method 325B. These adjustments are reflected in the dilution factor.

## Receiving Notes

There were no receiving discrepancies.

## Analytical Notes

There were no analytical discrepancies.

## Definition of Data Qualifying Flags

The following qualifiers may have been used on the data analysis sheets and indicate as follows:

B - Compound present in field blank(s) greater than 1/3 the compliance limit or measured target analyte (background subtraction not performed).
J - Estimated value - analyte detected between the Method Detection Limit and Reporting Limit.
E - Exceeds instrument calibration range.
S - Saturated peak.
Q - Exceeds quality control limits.
U - Compound analyzed for but not detected above the MDL value.
I - Internal Standard recovery outside acceptance limits
P - Field Duplicate(s) exceed 30%RPD
Pc- Field Duplicate(s) exceed 30%RPD, concentrations of sample and/or its duplicate less than 2 times reporting limit.
Pl - Field Duplicate(s) exceed 30%RPD, lab error noted.
L - Recovery of bracketing CCV(s) exceeded acceptance limits.
H - Sample analyzed outside of method hold time.
D - Sample duration outside 14+/-1 days
Fe - Field Error or discrepancy
Te - Tube Error or discrepancy
CN - See case narrative explanation.

File extensions may have been used on the data analysis sheets and indicates as follows:
a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

Project #:
Workorder #: 2203311

Dear Mr. Brian O'Shea

The following report includes the data for the above referenced project for sample(s) received on 3/11/2022 at Eurofins Air Toxics LLC.

The data and associated QC analyzed by EPA Method 325B are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics LLC. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kathleen Kaneko at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kathleen Kaneko

Project Manager

**LABORATORY NARRATIVE**
**ATM EPA 325B**
**ERM Northern Division (formerly ERM-North Central)**
**Workorder# 2203311**

Six Carbopack X CAMSCO samples were received on March 11, 2022. The laboratory performed the analysis via EPA Method 325B using GC/MS in the full scan mode.

The mass of each target compound adsorbed by the sampler was converted to units of concentration using the sample deployment time and the uptake rate for each VOC. Uptake rates are adjusted for local conditions and concentrations are reported based on normal ambient temperature and pressure conditions (25 deg C and 760 mm Hg) following the required calculations in EPA Method 325B. These adjustments are reflected in the dilution factor.

## Receiving Notes

The Chain of Custody (COC) information for sample 20220223-0309-SW-SAM5 did not match the information on the tube with regard to tube identification. The client was notified of the discrepancy and the information on the tubes was used to process and report the samples.

## Analytical Notes

There were no analytical discrepancies.

## Definition of Data Qualifying Flags

The following qualifiers may have been used on the data analysis sheets and indicate as follows:

B - Compound present in field blank(s) greater than 1/3 the compliance limit or measured target analyte (background subtraction not performed).
J - Estimated value - analyte detected between the Method Detection Limit and Reporting Limit.
E - Exceeds instrument calibration range.
S - Saturated peak.
Q - Exceeds quality control limits.
U - Compound analyzed for but not detected above the MDL value.
I - Internal Standard recovery outside acceptance limits
P - Field Duplicate(s) exceed 30%RPD
Pc- Field Duplicate(s) exceed 30%RPD, concentrations of sample and/or its duplicate less than 2 times reporting limit.
Pl - Field Duplicate(s) exceed 30%RPD, lab error noted.
L - Recovery of bracketing CCV(s) exceeded acceptance limits.
H - Sample analyzed outside of method hold time.
D - Sample duration outside 14+/-1 days
Fe - Field Error or discrepancy
Te - Tube Error or discrepancy
CN - See case narrative explanation.

File extensions may have been used on the data analysis sheets and indicates as follows:
a-File was requantified
b-File was quantified by a second column and detector

r1-File was requantified for the purpose of reissue

Mr. Brian O'Shea
ERM Northern Division (formerly ERM-North Central)
125 South Wacker
Suite 2500
Chicago IL 60606

Project Name: Champaign 5th Street
Project #:
Workorder #: 2204178

Dear Mr. Brian O'Shea

The following report includes the data for the above referenced project for sample(s) received on 4/7/2022 at Eurofins Air Toxics LLC.

The data and associated QC analyzed by EPA Method 325B are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics LLC. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kathleen Kaneko at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kathleen Kaneko

**LABORATORY NARRATIVE**
**ATM EPA 325B**
**ERM Northern Division (formerly ERM-North Central)**
**Workorder# 2204178**

Six Carbopack X CAMSCO samples were received on April 07, 2022. The laboratory performed the analysis via EPA Method 325B using GC/MS in the full scan mode.

The mass of each target compound adsorbed by the sampler was converted to units of concentration using the sample deployment time and the uptake rate for each VOC. Uptake rates are adjusted for local conditions and concentrations are reported based on normal ambient temperature and pressure conditions (25 deg C and 760 mm Hg) following the required calculations in EPA Method 325B. These adjustments are reflected in the dilution factor.

## Receiving Notes

There were no receiving discrepancies.

## Analytical Notes

There were no analytical discrepancies.

## Definition of Data Qualifying Flags

The following qualifiers may have been used on the data analysis sheets and indicate as follows:

B - Compound present in field blank(s) greater than 1/3 the compliance limit or measured target analyte (background subtraction not performed).
J - Estimated value - analyte detected between the Method Detection Limit and Reporting Limit.
E - Exceeds instrument calibration range.
S - Saturated peak.
Q - Exceeds quality control limits.
U - Compound analyzed for but not detected above the MDL value.
I - Internal Standard recovery outside acceptance limits
P - Field Duplicate(s) exceed 30%RPD
Pc- Field Duplicate(s) exceed 30%RPD, concentrations of sample and/or its duplicate less than 2 times reporting limit.
Pl - Field Duplicate(s) exceed 30%RPD, lab anomaly noted.
L - Recovery of bracketing CCV(s) exceeded acceptance limits.
H - Sample analyzed outside of method hold time.
D - Sample duration outside 14+/-1 days
Fe - Field Error or discrepancy
Te - Tube Error or discrepancy
CN - See case narrative explanation.

File extensions may have been used on the data analysis sheets and indicates as follows:
a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

Mr. Brian O'Shea
ERM Northern Division (formerly ERM-North Central)
125 South Wacker
Suite 2500
Chicago IL 60606

Project Name: Champaign 5th St
Project #:
Workorder #: 2204538

Dear Mr. Brian O'Shea

The following report includes the data for the above referenced project for sample(s) received on 4/21/2022 at Eurofins Air Toxics LLC.

The data and associated QC analyzed by EPA Method 325B are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics LLC. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kathleen Kaneko at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kathleen Kaneko

Project Manager

**LABORATORY NARRATIVE**
**ATM EPA 325B**
**ERM Northern Division (formerly ERM-North Central)**
**Workorder# 2204538**

Six Carbopack X CAMSCO samples were received on April 21, 2022. The laboratory performed the analysis via EPA Method 325B using GC/MS in the full scan mode.

The mass of each target compound adsorbed by the sampler was converted to units of concentration using the sample deployment time and the uptake rate for each VOC. Uptake rates are adjusted for local conditions and concentrations are reported based on normal ambient temperature and pressure conditions (25 deg C and 760 mm Hg) following the required calculations in EPA Method 325B. These adjustments are reflected in the dilution factor.

## Receiving Notes

There were no receiving discrepancies.

## Analytical Notes

There were no analytical discrepancies.

## Definition of Data Qualifying Flags

The following qualifiers may have been used on the data analysis sheets and indicate as follows:

B - Compound present in field blank(s) greater than 1/3 the compliance limit or measured target analyte (background subtraction not performed).
J - Estimated value - analyte detected between the Method Detection Limit and Reporting Limit.
E - Exceeds instrument calibration range.
S - Saturated peak.
Q - Exceeds quality control limits.
U - Compound analyzed for but not detected above the MDL value.
I - Internal Standard recovery outside acceptance limits
P - Field Duplicate(s) exceed 30%RPD
Pc- Field Duplicate(s) exceed 30%RPD, concentrations of sample and/or its duplicate less than 2 times reporting limit.
Pl - Field Duplicate(s) exceed 30%RPD, lab anomaly noted.
L - Recovery of bracketing CCV(s) exceeded acceptance limits.
H - Sample analyzed outside of method hold time.
D - Sample duration outside 14+/-1 days
Fe - Field Error or discrepancy
Te - Tube Error or discrepancy
CN - See case narrative explanation.

File extensions may have been used on the data analysis sheets and indicates as follows:
a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

Dear Mr. Brian O'Shea

The following report includes the data for the above referenced project for sample(s) received on 5/3/2022 at Eurofins Air Toxics LLC.

The data and associated QC analyzed by EPA Method 325B are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics LLC. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kathleen Kaneko at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kathleen Kaneko

**LABORATORY NARRATIVE**
**ATM EPA 325B**
**ERM Northern Division (formerly ERM-North Central)**
**Workorder# 2205043**

Six Carbopack X CAMSCO samples were received on May 03, 2022. The laboratory performed the analysis via EPA Method 325B using GC/MS in the full scan mode.

The mass of each target compound adsorbed by the sampler was converted to units of concentration using the sample deployment time and the uptake rate for each VOC. Uptake rates are adjusted for local conditions and concentrations are reported based on normal ambient temperature and pressure conditions (25 deg C and 760 mm Hg) following the required calculations in EPA Method 325B. These adjustments are reflected in the dilution factor.

## Receiving Notes

There were no receiving discrepancies.

## Analytical Notes

There were no analytical discrepancies.

## Definition of Data Qualifying Flags

The following qualifiers may have been used on the data analysis sheets and indicate as follows:

B - Compound present in field blank(s) greater than 1/3 the compliance limit or measured target analyte (background subtraction not performed).
J - Estimated value - analyte detected between the Method Detection Limit and Reporting Limit.
E - Exceeds instrument calibration range.
S - Saturated peak.
Q - Exceeds quality control limits.
U - Compound analyzed for but not detected above the MDL value.
I - Internal Standard recovery outside acceptance limits
P - Field Duplicate(s) exceed 30%RPD
Pc- Field Duplicate(s) exceed 30%RPD, concentrations of sample and/or its duplicate less than 2 times reporting limit.
Pl - Field Duplicate(s) exceed 30%RPD, lab anomaly noted.
L - Recovery of bracketing CCV(s) exceeded acceptance limits.
H - Sample analyzed outside of method hold time.
D - Sample duration outside 14+/-1 days
Fe - Field Error or discrepancy
Te - Tube Error or discrepancy
CN - See case narrative explanation.

File extensions may have been used on the data analysis sheets and indicates as follows:
a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

Project Name: Champaign 5th St.
Project #:
Workorder #: 2205357

Dear Mr. Brian O'Shea

The following report includes the data for the above referenced project for sample(s) received on 5/16/2022 at Eurofins Air Toxics LLC.

The data and associated QC analyzed by EPA Method 325B are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics LLC. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kathleen Kaneko at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kathleen Kaneko

Project Manager

Six Carbopack X CAMSCO samples were received on May 16, 2022. The laboratory performed the analysis via EPA Method 325B using GC/MS in the full scan mode.

The mass of each target compound adsorbed by the sampler was converted to units of concentration using the sample deployment time and the uptake rate for each VOC. Uptake rates are adjusted for local conditions and concentrations are reported based on normal ambient temperature and pressure conditions (25 deg C and 760 mm Hg) following the required calculations in EPA Method 325B. These adjustments are reflected in the dilution factor.

## Receiving Notes

Samples 20220429-05-NE-SAM2 and 20220429-05-SE-SAM3 collected using tube 1155768 and 1155791 were received with completely untightened storage caps. Client was notified and directed the laboratory to analyze and report the affected sample.

Sample collection time was not provided on the Chain of Custody for sample 20220429-05-SAM6. The client was contacted and a time of 0830 was provided.

## Analytical Notes

There were no analytical discrepancies.

## Definition of Data Qualifying Flags

The following qualifiers may have been used on the data analysis sheets and indicate as follows:

B - Compound present in field blank(s) greater than 1/3 the compliance limit or measured target analyte (background subtraction not performed).
J - Estimated value - analyte detected between the Method Detection Limit and Reporting Limit.
E - Exceeds instrument calibration range.
S - Saturated peak.
Q - Exceeds quality control limits.
U - Compound analyzed for but not detected above the MDL value.
I - Internal Standard recovery outside acceptance limits
P - Field Duplicate(s) exceed 30%RPD
Pc- Field Duplicate(s) exceed 30%RPD, concentrations of sample and/or its duplicate less than 2 times reporting limit.
Pl - Field Duplicate(s) exceed 30%RPD, lab anomaly noted.
L - Recovery of bracketing CCV(s) exceeded acceptance limits.
H - Sample analyzed outside of method hold time.
D - Sample duration outside 14+/-1 days
Fe - Field Error or discrepancy
Te - Tube Error or discrepancy
CN - See case narrative explanation.

File extensions may have been used on the data analysis sheets and indicates

# APPENDIX F LABORATORY ANALYTICAL REPORTS (METHOD TO-13A)

eurofins | Air Toxics

12/22/2021
Mr. Brian O'Shea
ERM Northern Division (formerly ERM-North Central)
125 South Wacker
Suite 2500
Chicago IL 60606

Project Name: Champaign 5th St.
Project #: 0529307
Workorder #: 2112210

Dear Mr. Brian O'Shea

The following report includes the data for the above referenced project for sample(s) received on 12/10/2021 at Eurofins Air Toxics LLC.

The data and associated QC analyzed by Modified TO-13A are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics LLC. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kathleen Kaneko at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kathleen Kaneko

Project Manager

**LABORATORY NARRATIVE**
**Modified TO-13A**
**ERM Northern Division (formerly ERM-North Central)**
**Workorder# 2112210**

Eleven PUF/XAD Cartridge-Low Volume samples were received on December 10, 2021. The laboratory performed the analysis for polycyclic aromatic hydrocarbons in air by modified EPA Method TO-13A. The PUF/XAD samples were extracted using Pressurized Fluid Extraction (PFE) by EPA Method 3545A. The sample extract was then concentrated to 1.0 mL and analyzed by GC/MS in the full scan mode.

To meet the quality control objectives outlined in Method TO-13A, a field blank is required for each sampling episode. If field blanks are not provided to the laboratory, any attendant risk to data quality is the responsibility of the data user.

The frequency of matrix spikes are determined by the different monitoring programs. Matrix spikes are not included in the routine calibration specifications for TO-13A.

| ***Requirement*** | ***TO-13A*** | ***ATL Modifications*** |
|---|---|---|
| Initial Calibration | Calibration range: 0.1-2.5 ug/mL in Hexane | Calibration range: 1.0-500 ug/mL in Methylene chloride |
| Method Blank | <MDL | <Reporting limit |
| Surrogate Recoveries | 60-120% | 50-150% for Field Surrogates<br>Fluoranthene-d10 and Benzo(a)pyrene-d12 |

## Receiving Notes

Per client request via email on 12/14/21, the identification of samples 21211206-09-NW-Camp 4 21211206-09-NE-Camp 2, 21211206-09-SW-Camp 5, 21211206-09-SE-Camp 1 and 21211206-09-SE-Camp 3 were revised to 21211203-06-NW-Camp4, 21211203-06-NE-Camp2, 21211203-06-SW-Camp5, 21211203-06-SE-Camp1 and 21211203-06-SE-Camp3. As a result, the sample identifications no longer matches the information on the Chain of Custody.

According to the Chain of Custody (COC), sample 21211206-09-SE-Camp 3 was collected on 12/9/21. However, the date on the sample tag reflects a collection date of 12/6/21. Therefore the date on the COC was used to calculate the sample holding time.

## Analytical Notes

The sample cartridges were pre-spiked with Fluoranthene-d10 and Benzo(a)Pyrene-d12 on 11/29/2021.

Naphthalene was detected in the Laboratory Blank. Due to the nature of PUF/XAD2 extraction it is not possible to re-extract the associated samples. Associated results are "B" flagged.

The recovery for Anthracene in the LCSD was outside the laboratory control limits. Due to the nature of PUF/XAD2 extraction, it is not possible to re-extract the associated samples. All other LCSD recoveries were within allowed limits.

**Definition of Data Qualifying Flags**

Seven qualifiers may have been used on the data analysis sheets and indicate as follows:
E - Exceeds instrument calibration range.
Q - Exceeds quality control limits.
S - Saturated peak.
J - Estimated value.
B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).
U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.
N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:
a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

Project Name: Champaign 5th Street
Project #: 0529307
Workorder #: 2112289

Dear Mr. Brian O'Shea

The following report includes the data for the above referenced project for sample(s) received on 12/14/2021 at Eurofins Air Toxics LLC.

The data and associated QC analyzed by Modified TO-13A are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics LLC. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kathleen Kaneko at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kathleen Kaneko

Project Manager

**LABORATORY NARRATIVE**
**Modified TO-13A**
**ERM Northern Division (formerly ERM-North Central)**
**Workorder# 2112289**

Five PUF/XAD Cartridge samples were received on December 14, 2021. The laboratory performed the analysis for polycyclic aromatic hydrocarbons in air by modified EPA Method TO-13A. The PUF/XAD samples were extracted using Pressurized Fluid Extraction (PFE) by EPA Method 3545A. The sample extract was then concentrated to 1.0 mL and analyzed by GC/MS in the full scan mode.

To meet the quality control objectives outlined in Method TO-13A, a field blank is required for each sampling episode. If field blanks are not provided to the laboratory, any attendant risk to data quality is the responsibility of the data user.

The frequency of matrix spikes are determined by the different monitoring programs. Matrix spikes are not included in the routine calibration specifications for TO-13A.

| ***Requirement*** | ***TO-13A*** | ***ATL Modifications*** |
|---|---|---|
| Initial Calibration | Calibration range: 0.1-2.5 ug/mL in Hexane | Calibration range: 1.0-500 ug/mL in Methylene chloride |
| Method Blank | <MDL | <Reporting limit |
| Surrogate Recoveries | 60-120% | 50-150% for Field Surrogates<br>Fluoranthene-d10 and Benzo(a)pyrene-d12 |

## Receiving Notes

A Temperature Blank was included with the shipment. Temperature was measured and was not within 4±2 °C. Coolant in the form of blue ice was present. Analysis proceeded.

## Analytical Notes

The sample cartridges were pre-spiked with Fluoranthene-d10 and Benzo(a)Pyrene-d12 on 12/06/2021.

The recovery for Anthracene in the LCS was outside the laboratory control limits. Due to the nature of PUF/XAD2 extraction, it is not possible to re-extract the associated samples. All other LCS recoveries were within allowed limits.

## Definition of Data Qualifying Flags

Seven qualifiers may have been used on the data analysis sheets and indicate as follows:
E - Exceeds instrument calibration range.
Q - Exceeds quality control limits.
S - Saturated peak.
J - Estimated value.
B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).
U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data

page for project specific U-flag definition.
N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:
a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

Project #: 0529307
Workorder #: 2112405

Dear Mr. Brian O'Shea

The following report includes the data for the above referenced project for sample(s) received on 12/17/2021 at Eurofins Air Toxics LLC.

The data and associated QC analyzed by Modified TO-13A are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics LLC. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kathleen Kaneko at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kathleen Kaneko

**LABORATORY NARRATIVE**
**Modified TO-13A**
**ERM Northern Division (formerly ERM-North Central)**
**Workorder# 2112405**

Five PUF/XAD Cartridge samples were received on December 17, 2021. The laboratory performed the analysis for polycyclic aromatic hydrocarbons in air by modified EPA Method TO-13A. The PUF/XAD samples were extracted using Pressurized Fluid Extraction (PFE) by EPA Method 3545A. The sample extract was then concentrated to 1.0 mL and analyzed by GC/MS in the full scan mode.

To meet the quality control objectives outlined in Method TO-13A, a field blank is required for each sampling episode. If field blanks are not provided to the laboratory, any attendant risk to data quality is the responsibility of the data user.

The frequency of matrix spikes are determined by the different monitoring programs. Matrix spikes are not included in the routine calibration specifications for TO-13A.

| ***Requirement*** | ***TO-13A*** | ***ATL Modifications*** |
|---|---|---|
| Initial Calibration | Calibration range: 0.1-2.5 ug/mL in Hexane | Calibration range: 1.0-500 ug/mL in Methylene chloride |
| Method Blank | <MDL | <Reporting limit |
| Surrogate Recoveries | 60-120% | 50-150% for Field Surrogates<br>Fluoranthene-d10 and Benzo(a)pyrene-d12 |

## Receiving Notes

There were no receiving discrepancies.

## Analytical Notes

The sample cartridges were pre-spiked with Fluoranthene-d10 and Benzo(a)Pyrene-d12 on 12/06/2021.

## Definition of Data Qualifying Flags

Seven qualifiers may have been used on the data analysis sheets and indicate as follows:
E - Exceeds instrument calibration range.
Q - Exceeds quality control limits.
S - Saturated peak.
J - Estimated value.
B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).
U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.
N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:
a-File was requantified

b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

Dear Mr. Brian O'Shea

The following report includes the data for the above referenced project for sample(s) received on 12/21/2021 at Eurofins Air Toxics LLC.

The data and associated QC analyzed by Modified TO-13A are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics LLC. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kathleen Kaneko at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kathleen Kaneko

Project Manager

**LABORATORY NARRATIVE**
**Modified TO-13A**
**ERM Northern Division (formerly ERM-North Central)**
**Workorder# 2112518**

Five PUF/XAD Cartridge-Low Volume samples were received on December 21, 2021. The laboratory performed the analysis for polycyclic aromatic hydrocarbons in air by modified EPA Method TO-13A. The PUF/XAD samples were extracted using Pressurized Fluid Extraction (PFE) by EPA Method 3545A. The sample extract was then concentrated to 1.0 mL and analyzed by GC/MS in the full scan mode.

To meet the quality control objectives outlined in Method TO-13A, a field blank is required for each sampling episode. If field blanks are not provided to the laboratory, any attendant risk to data quality is the responsibility of the data user.

The frequency of matrix spikes are determined by the different monitoring programs. Matrix spikes are not included in the routine calibration specifications for TO-13A.

| ***Requirement*** | ***TO-13A*** | ***ATL Modifications*** |
|---|---|---|
| Initial Calibration | Calibration range: 0.1-2.5 ug/mL in Hexane | Calibration range: 1.0-500 ug/mL in Methylene chloride |
| Method Blank | <MDL | <Reporting limit |
| Surrogate Recoveries | 60-120% | 50-150% for Field Surrogates<br>Fluoranthene-d10 and Benzo(a)pyrene-d12 |

## Receiving Notes

There were no receiving discrepancies.

## Analytical Notes

The sample cartridges were pre-spiked with Fluoranthene-d10 and Benzo(a)Pyrene-d12 on 12/13/2021.

The recoveries for Naphthalene and Fluoranthene in the LCS were outside the laboratory control limits. Due to the nature of PUF/XAD2 extraction, it is not possible to re-extract the associated samples. All other LCS recoveries were within allowed limits.

## Definition of Data Qualifying Flags

Seven qualifiers may have been used on the data analysis sheets and indicate as follows:
E - Exceeds instrument calibration range.
Q - Exceeds quality control limits.
S - Saturated peak.
J - Estimated value.
B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).
U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data

page for project specific U-flag definition.
N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:
a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

Dear Mr. Brian O'Shea

The following report includes the data for the above referenced project for sample(s) received on 12/23/2021 at Eurofins Air Toxics LLC.

The data and associated QC analyzed by Modified TO-13A are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics LLC. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kathleen Kaneko at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kathleen Kaneko

Project Manager

**LABORATORY NARRATIVE**
**Modified TO-13A**
**ERM Northern Division (formerly ERM-North Central)**
**Workorder# 2112588**

Five PUF/XAD Cartridge-Low Volume samples were received on December 23, 2021. The laboratory performed the analysis for polycyclic aromatic hydrocarbons in air by modified EPA Method TO-13A. The PUF/XAD samples were extracted using Pressurized Fluid Extraction (PFE) by EPA Method 3545A. The sample extract was then concentrated to 1.0 mL and analyzed by GC/MS in the full scan mode.

To meet the quality control objectives outlined in Method TO-13A, a field blank is required for each sampling episode. If field blanks are not provided to the laboratory, any attendant risk to data quality is the responsibility of the data user.

The frequency of matrix spikes are determined by the different monitoring programs. Matrix spikes are not included in the routine calibration specifications for TO-13A.

| ***Requirement*** | ***TO-13A*** | ***ATL Modifications*** |
|---|---|---|
| Initial Calibration | Calibration range: 0.1-2.5 ug/mL in Hexane | Calibration range: 1.0-500 ug/mL in Methylene chloride |
| Method Blank | <MDL | <Reporting limit |
| Surrogate Recoveries | 60-120% | 50-150% for Field Surrogates<br>Fluoranthene-d10 and Benzo(a)pyrene-d12 |

## Receiving Notes

There were no receiving discrepancies.

## Analytical Notes

The sample cartridges were pre-spiked with Fluoranthene-d10 and Benzo(a)Pyrene-d12 on 12/13/2021.

The recovery for Naphthalene in the LCS was outside the laboratory control limits. Due to the nature of PUF/XAD2 extraction, it is not possible to re-extract the associated samples. All other LCS recoveries were within allowed limits.

The Relative Percent Difference (RPD) of the LCS/LCSD exceeded acceptance limits for Naphthalene and 2-Methylnaphthalene.

## Definition of Data Qualifying Flags

Seven qualifiers may have been used on the data analysis sheets and indicate as follows:
E - Exceeds instrument calibration range.
Q - Exceeds quality control limits.
S - Saturated peak.
J - Estimated value.

B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).
U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.
N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:
a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

Mr. Brian O'Shea
ERM Northern Division (formerly ERM-North Central)
125 South Wacker
Suite 2500
Chicago IL 60606

Project Name: Champaign 5th St.
Project #: 0529307
Workorder #: 2112656

Dear Mr. Brian O'Shea

The following report includes the data for the above referenced project for sample(s) received on 12/28/2021 at Eurofins Air Toxics LLC.

The data and associated QC analyzed by Modified TO-13A are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics LLC. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kathleen Kaneko at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kathleen Kaneko

Project Manager

**LABORATORY NARRATIVE**
**Modified TO-13A**
**ERM Northern Division (formerly ERM-North Central)**
**Workorder# 2112656**

Five PUF/XAD Cartridge-Low Volume samples were received on December 28, 2021. The laboratory performed the analysis for polycyclic aromatic hydrocarbons in air by modified EPA Method TO-13A. The PUF/XAD samples were extracted using Pressurized Fluid Extraction (PFE) by EPA Method 3545A. The sample extract was then concentrated to 1.0 mL and analyzed by GC/MS in the full scan mode.

To meet the quality control objectives outlined in Method TO-13A, a field blank is required for each sampling episode. If field blanks are not provided to the laboratory, any attendant risk to data quality is the responsibility of the data user.

The frequency of matrix spikes are determined by the different monitoring programs. Matrix spikes are not included in the routine calibration specifications for TO-13A.

| ***Requirement*** | ***TO-13A*** | ***ATL Modifications*** |
|---|---|---|
| Initial Calibration | Calibration range: 0.1-2.5 ug/mL in Hexane | Calibration range: 1.0-500 ug/mL in Methylene chloride |
| Method Blank | <MDL | <Reporting limit |
| Surrogate Recoveries | 60-120% | 50-150% for Field Surrogates<br>Fluoranthene-d10 and Benzo(a)pyrene-d12 |

## Receiving Notes

There were no receiving discrepancies.

## Analytical Notes

The sample cartridges were pre-spiked with Fluoranthene-d10 and Benzo(a)Pyrene-d12 on 12/20/2021.

Due to laboratory error, the media used for collection of samples 20211222-23-SW-SAM5, 20211222-23-NW-SAM4, 20211222-23-NE-SAM2, 20211222-23-SE-SAM1, and 20211222-23-SE-SAM3 were not pre-spiked with surrogates Fluoranthene-d10 and Benzo(a)Pyrene-d12 prior to shipment. Corrective action #CAR-091 was initiated.

## Definition of Data Qualifying Flags

Seven qualifiers may have been used on the data analysis sheets and indicate as follows:
E - Exceeds instrument calibration range.
Q - Exceeds quality control limits.
S - Saturated peak.
J - Estimated value.
B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).

U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.
N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:
a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

Mr. Brian O'Shea
ERM Northern Division (formerly ERM-North Central)
125 South Wacker
Suite 2500
Chicago IL 60606

Project Name: Champaign 5th St.
Project #: 0529307
Workorder #: 2112723

Dear Mr. Brian O'Shea

The following report includes the data for the above referenced project for sample(s) received on 12/30/2021 at Eurofins Air Toxics LLC.

The data and associated QC analyzed by Modified TO-13A are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics LLC. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kathleen Kaneko at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kathleen Kaneko

Project Manager

**LABORATORY NARRATIVE**
**Modified TO-13A**
**ERM Northern Division (formerly ERM-North Central)**
**Workorder# 2112723**

Five PUF/XAD Cartridge-Low Volume samples were received on December 30, 2021. The laboratory performed the analysis for polycyclic aromatic hydrocarbons in air by modified EPA Method TO-13A. The PUF/XAD samples were extracted using Pressurized Fluid Extraction (PFE) by EPA Method 3545A. The sample extract was then concentrated to 1.0 mL and analyzed by GC/MS in the full scan mode.

To meet the quality control objectives outlined in Method TO-13A, a field blank is required for each sampling episode. If field blanks are not provided to the laboratory, any attendant risk to data quality is the responsibility of the data user.

The frequency of matrix spikes are determined by the different monitoring programs. Matrix spikes are not included in the routine calibration specifications for TO-13A.

| ***Requirement*** | ***TO-13A*** | ***ATL Modifications*** |
|---|---|---|
| Initial Calibration | Calibration range: 0.1-2.5 ug/mL in Hexane | Calibration range: 1.0-500 ug/mL in Methylene chloride |
| Method Blank | <MDL | <Reporting limit |
| Surrogate Recoveries | 60-120% | 50-150% for Field Surrogates<br>Fluoranthene-d10 and Benzo(a)pyrene-d12 |

## Receiving Notes

The Chain of Custody (COC) information for sample 20211227-29-SE-SAM5 did not match the entry on the sample tag with regard to sample identification. The information on the COC was used to process and report the sample.

## Analytical Notes

The sample cartridges were pre-spiked with Fluoranthene-d10 and Benzo(a)Pyrene-d12 on 12/20/2021.

Due to laboratory error, the media used for collection of samples 20211227-29-SE-SAM1, 20211227-29-NE-SAM2, 20211227-29-SE-SAM3, 20211227-29-NW-SAM4, and 20211227-29-SE-SAM5 were not pre-spiked with surrogates Fluoranthene-d10 and Benzo(a)Pyrene-d12 prior to shipment. Corrective action #CAR-091 was initiated.

## Definition of Data Qualifying Flags

Seven qualifiers may have been used on the data analysis sheets and indicate as follows:
E - Exceeds instrument calibration range.
Q - Exceeds quality control limits.
S - Saturated peak.
J - Estimated value.
B - Compound present in laboratory blank greater than reporting limit (background subtraction not

performed).
U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.
N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:
a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

Mr. Brian O'Shea
ERM Northern Division (formerly ERM-North Central)
125 South Wacker
Suite 2500
Chicago IL 60606

Project Name: Champaign 5th St.
Project #: 0529307
Workorder #: 2201011

Dear Mr. Brian O'Shea

The following report includes the data for the above referenced project for sample(s) received on 1/4/2022 at Eurofins Air Toxics LLC.

The data and associated QC analyzed by Modified TO-13A are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics LLC. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kathleen Kaneko at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kathleen Kaneko

Project Manager

**LABORATORY NARRATIVE**
**Modified TO-13A**
**ERM Northern Division (formerly ERM-North Central)**
**Workorder# 2201011**

Five PUF/XAD Cartridge-Low Volume samples were received on January 04, 2022. The laboratory performed the analysis for polycyclic aromatic hydrocarbons in air by modified EPA Method TO-13A. The PUF/XAD samples were extracted using Pressurized Fluid Extraction (PFE) by EPA Method 3545A. The sample extract was then concentrated to 1.0 mL and analyzed by GC/MS in the full scan mode.

To meet the quality control objectives outlined in Method TO-13A, a field blank is required for each sampling episode. If field blanks are not provided to the laboratory, any attendant risk to data quality is the responsibility of the data user.

The frequency of matrix spikes are determined by the different monitoring programs. Matrix spikes are not included in the routine calibration specifications for TO-13A.

| ***Requirement*** | ***TO-13A*** | ***ATL Modifications*** |
|---|---|---|
| Initial Calibration | Calibration range: 0.1-2.5 ug/mL in Hexane | Calibration range: 1.0-500 ug/mL in Methylene chloride |
| Method Blank | <MDL | <Reporting limit |
| Surrogate Recoveries | 60-120% | 50-150% for Field Surrogates<br>Fluoranthene-d10 and Benzo(a)pyrene-d12 |

## Receiving Notes

There were no receiving discrepancies.

## Analytical Notes

The sample cartridges were pre-spiked with Fluoranthene-d10 and Benzo(a)Pyrene-d12 on 12/27/2021.

## Definition of Data Qualifying Flags

Seven qualifiers may have been used on the data analysis sheets and indicate as follows:
E - Exceeds instrument calibration range.
Q - Exceeds quality control limits.
S - Saturated peak.
J - Estimated value.
B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).
U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.
N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates

as follows:
a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

Mr. Brian O'Shea
ERM Northern Division (formerly ERM-North Central)
125 South Wacker
Suite 2500
Chicago IL 60606

Project Name: Champaign 5th St.
Project #: 0529307
Workorder #: 2201068

Dear Mr. Brian O'Shea

The following report includes the data for the above referenced project for sample(s) received on 1/7/2022 at Eurofins Air Toxics LLC.

The data and associated QC analyzed by Modified TO-13A are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics LLC. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kathleen Kaneko at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kathleen Kaneko

Project Manager

**LABORATORY NARRATIVE**
**Modified TO-13A**
**ERM Northern Division (formerly ERM-North Central)**
**Workorder# 2201068**

Seven PUF/XAD Cartridge-Low Volume samples were received on January 07, 2022. The laboratory performed the analysis for polycyclic aromatic hydrocarbons in air by modified EPA Method TO-13A. The PUF/XAD samples were extracted using Pressurized Fluid Extraction (PFE) by EPA Method 3545A. The sample extract was then concentrated to 1.0 mL and analyzed by GC/MS in the full scan mode.

To meet the quality control objectives outlined in Method TO-13A, a field blank is required for each sampling episode. If field blanks are not provided to the laboratory, any attendant risk to data quality is the responsibility of the data user.

The frequency of matrix spikes are determined by the different monitoring programs. Matrix spikes are not included in the routine calibration specifications for TO-13A.

| ***Requirement*** | ***TO-13A*** | ***ATL Modifications*** |
|---|---|---|
| Initial Calibration | Calibration range: 0.1-2.5 ug/mL in Hexane | Calibration range: 1.0-500 ug/mL in Methylene chloride |
| Method Blank | <MDL | <Reporting limit |
| Surrogate Recoveries | 60-120% | 50-150% for Field Surrogates<br>Fluoranthene-d10 and Benzo(a)pyrene-d12 |

## Receiving Notes

The Chain of Custody (COC) information for sample 20280103-5-BLANK2 did not match the entry on the sample tag with regard to sample identification. The information on the sample tag was used to process and report the sample.

## Analytical Notes

The sample cartridges were pre-spiked with Fluoranthene-d10 and Benzo(a)Pyrene-d12 on 12/06/2021, 12/13/2021, and 12/27/2021.

All Quality Control Limit exceedances and affected sample results are noted by flags. Each flag is defined at the bottom of this Case Narrative and on each Sample Result Summary page. Target compound non-detects in the samples that are associated with high bias in QC analyses have not been flagged.

## Definition of Data Qualifying Flags

Seven qualifiers may have been used on the data analysis sheets and indicate as follows:
E - Exceeds instrument calibration range.
Q - Exceeds quality control limits.
S - Saturated peak.
J - Estimated value.

B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).
U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.
N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:
a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

Mr. Brian O'Shea
ERM Northern Division (formerly ERM-North Central)
125 South Wacker
Suite 2500
Chicago IL 60606

Project Name: Champaign 5th St.
Project #: 0529307-900
Workorder #: 2201153

Dear Mr. Brian O'Shea

The following report includes the data for the above referenced project for sample(s) received on 1/11/2022 at Eurofins Air Toxics LLC.

The data and associated QC analyzed by Modified TO-13A are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics LLC. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kathleen Kaneko at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kathleen Kaneko

Project Manager

**LABORATORY NARRATIVE**
**Modified TO-13A**
**ERM Northern Division (formerly ERM-North Central)**
**Workorder# 2201153**

Six PUF/XAD Cartridge-Low Volume samples were received on January 11, 2022. The laboratory performed the analysis for polycyclic aromatic hydrocarbons in air by modified EPA Method TO-13A. The PUF/XAD samples were extracted using Pressurized Fluid Extraction (PFE) by EPA Method 3545A. The sample extract was then concentrated to 1.0 mL and analyzed by GC/MS in the full scan mode.

To meet the quality control objectives outlined in Method TO-13A, a field blank is required for each sampling episode. If field blanks are not provided to the laboratory, any attendant risk to data quality is the responsibility of the data user.

The frequency of matrix spikes are determined by the different monitoring programs. Matrix spikes are not included in the routine calibration specifications for TO-13A.

| ***Requirement*** | ***TO-13A*** | ***ATL Modifications*** |
|---|---|---|
| Initial Calibration | Calibration range: 0.1-2.5 ug/mL in Hexane | Calibration range: 1.0-500 ug/mL in Methylene chloride |
| Method Blank | <MDL | <Reporting limit |
| Surrogate Recoveries | 60-120% | 50-150% for Field Surrogates<br>Fluoranthene-d10 and Benzo(a)pyrene-d12 |

## Receiving Notes

There were no receiving discrepancies.

## Analytical Notes

The sample cartridges were pre-spiked with Fluoranthene-d10 and Benzo(a)Pyrene-d12 on 12/27/2021.

## Definition of Data Qualifying Flags

Seven qualifiers may have been used on the data analysis sheets and indicate as follows:
E - Exceeds instrument calibration range.
Q - Exceeds quality control limits.
S - Saturated peak.
J - Estimated value.
B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).
U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.
N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:

a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

Project Name: Champaign 5th St
Project #: 0529307-900
Workorder #: 2201207

Dear Mr. Brian O'Shea

The following report includes the data for the above referenced project for sample(s) received on 1/13/2022 at Eurofins Air Toxics LLC.

The data and associated QC analyzed by Modified TO-13A are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics LLC. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kathleen Kaneko at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kathleen Kaneko

Project Manager

**LABORATORY NARRATIVE**
**Modified TO-13A**
**ERM Northern Division (formerly ERM-North Central)**
**Workorder# 2201207**

Six PUF/XAD Cartridge-Low Volume samples were received on January 13, 2022. The laboratory performed the analysis for polycyclic aromatic hydrocarbons in air by modified EPA Method TO-13A. The PUF/XAD samples were extracted using Pressurized Fluid Extraction (PFE) by EPA Method 3545A. The sample extract was then concentrated to 1.0 mL and analyzed by GC/MS in the full scan mode.

To meet the quality control objectives outlined in Method TO-13A, a field blank is required for each sampling episode. If field blanks are not provided to the laboratory, any attendant risk to data quality is the responsibility of the data user.

The frequency of matrix spikes are determined by the different monitoring programs. Matrix spikes are not included in the routine calibration specifications for TO-13A.

| ***Requirement*** | ***TO-13A*** | ***ATL Modifications*** |
|---|---|---|
| Initial Calibration | Calibration range: 0.1-2.5 ug/mL in Hexane | Calibration range: 1.0-500 ug/mL in Methylene chloride |
| Method Blank | <MDL | <Reporting limit |
| Surrogate Recoveries | 60-120% | 50-150% for Field Surrogates<br>Fluoranthene-d10 and Benzo(a)pyrene-d12 |

## Receiving Notes

There were no receiving discrepancies.

## Analytical Notes

The sample cartridges were pre-spiked with Fluoranthene-d10 and Benzo(a)Pyrene-d12 on 01/03/2022.

## Definition of Data Qualifying Flags

Seven qualifiers may have been used on the data analysis sheets and indicate as follows:
E - Exceeds instrument calibration range.
Q - Exceeds quality control limits.
S - Saturated peak.
J - Estimated value.
B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).
U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.
N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:

a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

Project #: 0529307-900
Workorder #: 2201351

Dear Mr. Brian O'Shea

The following report includes the data for the above referenced project for sample(s) received on 1/18/2022 at Eurofins Air Toxics LLC.

The data and associated QC analyzed by Modified TO-13A are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics LLC. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kathleen Kaneko at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kathleen Kaneko

Project Manager

**LABORATORY NARRATIVE**
**Modified TO-13A**
**ERM Northern Division (formerly ERM-North Central)**
**Workorder# 2201351**

Six PUF/XAD Cartridge-Low Volume samples were received on January 18, 2022. The laboratory performed the analysis for polycyclic aromatic hydrocarbons in air by modified EPA Method TO-13A. The PUF/XAD samples were extracted using Pressurized Fluid Extraction (PFE) by EPA Method 3545A. The sample extract was then concentrated to 1.0 mL and analyzed by GC/MS in the full scan mode.

To meet the quality control objectives outlined in Method TO-13A, a field blank is required for each sampling episode. If field blanks are not provided to the laboratory, any attendant risk to data quality is the responsibility of the data user.

The frequency of matrix spikes are determined by the different monitoring programs. Matrix spikes are not included in the routine calibration specifications for TO-13A.

| ***Requirement*** | ***TO-13A*** | ***ATL Modifications*** |
|---|---|---|
| Initial Calibration | Calibration range: 0.1-2.5 ug/mL in Hexane | Calibration range: 1.0-500 ug/mL in Methylene chloride |
| Method Blank | <MDL | <Reporting limit |
| Surrogate Recoveries | 60-120% | 50-150% for Field Surrogates<br>Fluoranthene-d10 and Benzo(a)pyrene-d12 |

## Receiving Notes

There were no receiving discrepancies.

## Analytical Notes

The sample cartridges were pre-spiked with Fluoranthene-d10 and Benzo(a)Pyrene-d12 on 01/03/2022 and 01/10/2022.

## Definition of Data Qualifying Flags

Seven qualifiers may have been used on the data analysis sheets and indicate as follows:
E - Exceeds instrument calibration range.
Q - Exceeds quality control limits.
S - Saturated peak.
J - Estimated value.
B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).
U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.
N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:

a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

Project Name: Champaign 5th St.
Project #: 0529307
Workorder #: 2201436

Dear Mr. Brian O'Shea

The following report includes the data for the above referenced project for sample(s) received on 1/21/2022 at Eurofins Air Toxics LLC.

The data and associated QC analyzed by Modified TO-13A are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics LLC. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kathleen Kaneko at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kathleen Kaneko

Project Manager

**LABORATORY NARRATIVE**
**Modified TO-13A**
**ERM Northern Division (formerly ERM-North Central)**
**Workorder# 2201436**

Six PUF/XAD Cartridge-Low Volume samples were received on January 21, 2022. The laboratory performed the analysis for polycyclic aromatic hydrocarbons in air by modified EPA Method TO-13A. The PUF/XAD samples were extracted using Pressurized Fluid Extraction (PFE) by EPA Method 3545A. The sample extract was then concentrated to 1.0 mL and analyzed by GC/MS in the full scan mode.

To meet the quality control objectives outlined in Method TO-13A, a field blank is required for each sampling episode. If field blanks are not provided to the laboratory, any attendant risk to data quality is the responsibility of the data user.

The frequency of matrix spikes are determined by the different monitoring programs. Matrix spikes are not included in the routine calibration specifications for TO-13A.

| ***Requirement*** | ***TO-13A*** | ***ATL Modifications*** |
|---|---|---|
| Initial Calibration | Calibration range: 0.1-2.5 ug/mL in Hexane | Calibration range: 1.0-500 ug/mL in Methylene chloride |
| Method Blank | <MDL | <Reporting limit |
| Surrogate Recoveries | 60-120% | 50-150% for Field Surrogates<br>Fluoranthene-d10 and Benzo(a)pyrene-d12 |

## Receiving Notes

There were no receiving discrepancies.

## Analytical Notes

The sample cartridges were pre-spiked with Fluoranthene-d10 and Benzo(a)Pyrene-d12 on 01/10/2022.

The Relative Percent Difference (RPD) of the LCS/LCSD exceeded acceptance limits for Benzo(b)fluoranthene.

## Definition of Data Qualifying Flags

Seven qualifiers may have been used on the data analysis sheets and indicate as follows:
E - Exceeds instrument calibration range.
Q - Exceeds quality control limits.
S - Saturated peak.
J - Estimated value.
B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).
U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.

N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:

a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

Mr. Brian O'Shea
ERM Northern Division (formerly ERM-North Central)
125 South Wacker
Suite 2500
Chicago IL 60606

Project Name: Champaign 5th St.
Project #: 0529307
Workorder #: 2201533

Dear Mr. Brian O'Shea

The following report includes the data for the above referenced project for sample(s) received on 1/25/2022 at Eurofins Air Toxics LLC.

The data and associated QC analyzed by Modified TO-13A are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics LLC. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kathleen Kaneko at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kathleen Kaneko

Project Manager

**LABORATORY NARRATIVE**
**Modified TO-13A**
**ERM Northern Division (formerly ERM-North Central)**
**Workorder# 2201533**

Six PUF/XAD Cartridge-Low Volume samples were received on January 25, 2022. The laboratory performed the analysis for polycyclic aromatic hydrocarbons in air by modified EPA Method TO-13A. The PUF/XAD samples were extracted using Pressurized Fluid Extraction (PFE) by EPA Method 3545A. The sample extract was then concentrated to 1.0 mL and analyzed by GC/MS in the full scan mode.

To meet the quality control objectives outlined in Method TO-13A, a field blank is required for each sampling episode. If field blanks are not provided to the laboratory, any attendant risk to data quality is the responsibility of the data user.

The frequency of matrix spikes are determined by the different monitoring programs. Matrix spikes are not included in the routine calibration specifications for TO-13A.

| ***Requirement*** | ***TO-13A*** | ***ATL Modifications*** |
|---|---|---|
| Initial Calibration | Calibration range: 0.1-2.5 ug/mL in Hexane | Calibration range: 1.0-500 ug/mL in Methylene chloride |
| Method Blank | <MDL | <Reporting limit |
| Surrogate Recoveries | 60-120% | 50-150% for Field Surrogates<br>Fluoranthene-d10 and Benzo(a)pyrene-d12 |

## Receiving Notes

There were no receiving discrepancies.

## Analytical Notes

The sample cartridges were pre-spiked with Fluoranthene-d10 and Benzo(a)Pyrene-d12 on 01/17/2022.

The recovery for Naphthalene in the LCS was outside the laboratory control limits. Due to the nature of PUF/XAD2 extraction, it is not possible to re-extract the associated samples. All other LCS recoveries were within allowed limits.

## Definition of Data Qualifying Flags

Seven qualifiers may have been used on the data analysis sheets and indicate as follows:
E - Exceeds instrument calibration range.
Q - Exceeds quality control limits.
S - Saturated peak.
J - Estimated value.
B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).
U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data

page for project specific U-flag definition.
N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:
a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

Mr. Brian O'Shea
ERM Northern Division (formerly ERM-North Central)
125 South Wacker
Suite 2500
Chicago IL 60606

Project Name: Champaign 5th St.
Project #: 0529307
Workorder #: 2201590

Dear Mr. Brian O'Shea

The following report includes the data for the above referenced project for sample(s) received on 1/27/2022 at Eurofins Air Toxics LLC.

The data and associated QC analyzed by Modified TO-13A are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics LLC. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kathleen Kaneko at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kathleen Kaneko

Project Manager

**LABORATORY NARRATIVE**
**Modified TO-13A**
**ERM Northern Division (formerly ERM-North Central)**
**Workorder# 2201590**

Six PUF/XAD Cartridge-Low Volume samples were received on January 27, 2022. The laboratory performed the analysis for polycyclic aromatic hydrocarbons in air by modified EPA Method TO-13A. The PUF/XAD samples were extracted using Pressurized Fluid Extraction (PFE) by EPA Method 3545A. The sample extract was then concentrated to 1.0 mL and analyzed by GC/MS in the full scan mode.

To meet the quality control objectives outlined in Method TO-13A, a field blank is required for each sampling episode. If field blanks are not provided to the laboratory, any attendant risk to data quality is the responsibility of the data user.

The frequency of matrix spikes are determined by the different monitoring programs. Matrix spikes are not included in the routine calibration specifications for TO-13A.

| ***Requirement*** | ***TO-13A*** | ***ATL Modifications*** |
|---|---|---|
| Initial Calibration | Calibration range: 0.1-2.5 ug/mL in Hexane | Calibration range: 1.0-500 ug/mL in Methylene chloride |
| Method Blank | <MDL | <Reporting limit |
| Surrogate Recoveries | 60-120% | 50-150% for Field Surrogates<br>Fluoranthene-d10 and Benzo(a)pyrene-d12 |

## Receiving Notes

The Chain of Custody (COC) information for samples 20220124-26-NE-SAM2 and 20220124-26-NW-SAM4 did not match the entries on the sample tags with regard to sample identification. Therefore the information on the COC was used to process and report the samples.

## Analytical Notes

The sample cartridges were pre-spiked with Fluoranthene-d10 and Benzo(a)Pyrene-d12 on 01/17/2022.

Recovery of surrogate Fluorene-d10 was below specified control limits in sample 20220124-26-SW-SAM5. Data is reported as qualified.

Recovery of surrogate Pyrene-d10 was above specified control limits in sample 20220124-26-SAM6. Data is reported as qualified.

The recoveries for Fluorene and Anthracene in the LCS were outside the laboratory control limits. Due to the nature of PUF/XAD2 extraction, it is not possible to re-extract the associated samples. All other LCS recoveries were within allowed limits.

**Definition of Data Qualifying Flags**

Seven qualifiers may have been used on the data analysis sheets and indicate as follows:
E - Exceeds instrument calibration range.
Q - Exceeds quality control limits.
S - Saturated peak.
J - Estimated value.
B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).
U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.
N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:
a-File was requantified
b-File was quantified by a second column and detector

Mr. Brian O'Shea
ERM Northern Division (formerly ERM-North Central)
125 South Wacker
Suite 2500
Chicago IL 60606

Project Name: Champaign 5th St.
Project #: 0529307
Workorder #: 2202010

Dear Mr. Brian O'Shea

The following report includes the data for the above referenced project for sample(s) received on 2/1/2022 at Eurofins Air Toxics LLC.

The data and associated QC analyzed by Modified TO-13A are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics LLC. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kathleen Kaneko at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kathleen Kaneko

Project Manager

**LABORATORY NARRATIVE**
**Modified TO-13A**
**ERM Northern Division (formerly ERM-North Central)**
**Workorder# 2202010**

Six PUF/XAD Cartridge-Low Volume samples were received on February 01, 2022. The laboratory performed the analysis for polycyclic aromatic hydrocarbons in air by modified EPA Method TO-13A. The PUF/XAD samples were extracted using Pressurized Fluid Extraction (PFE) by EPA Method 3545A. The sample extract was then concentrated to 1.0 mL and analyzed by GC/MS in the full scan mode.

To meet the quality control objectives outlined in Method TO-13A, a field blank is required for each sampling episode. If field blanks are not provided to the laboratory, any attendant risk to data quality is the responsibility of the data user.

The frequency of matrix spikes are determined by the different monitoring programs. Matrix spikes are not included in the routine calibration specifications for TO-13A.

| ***Requirement*** | ***TO-13A*** | ***ATL Modifications*** |
|---|---|---|
| Initial Calibration | Calibration range: 0.1-2.5 ug/mL in Hexane | Calibration range: 1.0-500 ug/mL in Methylene chloride |
| Method Blank | <MDL | <Reporting limit |
| Surrogate Recoveries | 60-120% | 50-150% for Field Surrogates<br>Fluoranthene-d10 and Benzo(a)pyrene-d12 |

## Receiving Notes

There were no receiving discrepancies.

## Analytical Notes

The sample cartridges were pre-spiked with Fluoranthene-d10 and Benzo(a)Pyrene-d12 on 01/24/2022.

## Definition of Data Qualifying Flags

Seven qualifiers may have been used on the data analysis sheets and indicate as follows:
E - Exceeds instrument calibration range.
Q - Exceeds quality control limits.
S - Saturated peak.
J - Estimated value.
B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).
U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.
N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:

a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

Mr. Brian O'Shea
ERM Northern Division (formerly ERM-North Central)
125 South Wacker
Suite 2500
Chicago IL 60606

Project Name: Champaign 5th St.
Project #: 0529307
Workorder #: 2202158

Dear Mr. Brian O'Shea

The following report includes the data for the above referenced project for sample(s) received on 2/9/2022 at Eurofins Air Toxics LLC.

The data and associated QC analyzed by Modified TO-13A are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics LLC. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kathleen Kaneko at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kathleen Kaneko

**LABORATORY NARRATIVE**
**Modified TO-13A**
**ERM Northern Division (formerly ERM-North Central)**
**Workorder# 2202158**

Six PUF/XAD Cartridge-Low Volume samples were received on February 09, 2022. The laboratory performed the analysis for polycyclic aromatic hydrocarbons in air by modified EPA Method TO-13A. The PUF/XAD samples were extracted using Pressurized Fluid Extraction (PFE) by EPA Method 3545A. The sample extract was then concentrated to 1.0 mL and analyzed by GC/MS in the full scan mode.

To meet the quality control objectives outlined in Method TO-13A, a field blank is required for each sampling episode. If field blanks are not provided to the laboratory, any attendant risk to data quality is the responsibility of the data user.

The frequency of matrix spikes are determined by the different monitoring programs. Matrix spikes are not included in the routine calibration specifications for TO-13A.

| ***Requirement*** | ***TO-13A*** | ***ATL Modifications*** |
|---|---|---|
| Initial Calibration | Calibration range: 0.1-2.5 ug/mL in Hexane | Calibration range: 1.0-500 ug/mL in Methylene chloride |
| Method Blank | <MDL | <Reporting limit |
| Surrogate Recoveries | 60-120% | 50-150% for Field Surrogates<br>Fluoranthene-d10 and Benzo(a)pyrene-d12 |

## Receiving Notes

There were no receiving discrepancies.

## Analytical Notes

The sample cartridges were pre-spiked with Fluoranthene-d10 and Benzo(a)Pyrene-d12 on 01/24/2022

## Definition of Data Qualifying Flags

Seven qualifiers may have been used on the data analysis sheets and indicate as follows:
E - Exceeds instrument calibration range.
Q - Exceeds quality control limits.
S - Saturated peak.
J - Estimated value.
B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).
U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.
N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:

a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

Mr. Brian O'Shea
ERM Northern Division (formerly ERM-North Central)
125 South Wacker
Suite 2500
Chicago IL 60606

Project Name: Champaign 5th St.
Project #: 0529307
Workorder #: 2202163

Dear Mr. Brian O'Shea

The following report includes the data for the above referenced project for sample(s) received on 2/9/2022 at Eurofins Air Toxics LLC.

The data and associated QC analyzed by Modified TO-13A are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics LLC. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kathleen Kaneko at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kathleen Kaneko

Project Manager

**LABORATORY NARRATIVE**
**Modified TO-13A**
**ERM Northern Division (formerly ERM-North Central)**
**Workorder# 2202163**

Six PUF/XAD Cartridge-Low Volume samples were received on February 09, 2022. The laboratory performed the analysis for polycyclic aromatic hydrocarbons in air by modified EPA Method TO-13A. The PUF/XAD samples were extracted using Pressurized Fluid Extraction (PFE) by EPA Method 3545A. The sample extract was then concentrated to 1.0 mL and analyzed by GC/MS in the full scan mode.

To meet the quality control objectives outlined in Method TO-13A, a field blank is required for each sampling episode. If field blanks are not provided to the laboratory, any attendant risk to data quality is the responsibility of the data user.

The frequency of matrix spikes are determined by the different monitoring programs. Matrix spikes are not included in the routine calibration specifications for TO-13A.

| ***Requirement*** | ***TO-13A*** | ***ATL Modifications*** |
|---|---|---|
| Initial Calibration | Calibration range: 0.1-2.5 ug/mL in Hexane | Calibration range: 1.0-500 ug/mL in Methylene chloride |
| Method Blank | <MDL | <Reporting limit |
| Surrogate Recoveries | 60-120% | 50-150% for Field Surrogates<br>Fluoranthene-d10 and Benzo(a)pyrene-d12 |

## Receiving Notes

The Chain of Custody (COC) information for samples 20220202-03-SE-SAM1, 20220202-03-NE-SAM2, 20220202-03-SE-SAM3, 20220202-03-NW-SAM4, 20220202-03-SW-SAM5 and 20220202-03-SAM6 did not match the entries on the sample tags with regard to sample identification. Therefore the information on the sample tags was used to process and report the samples.

## Analytical Notes

The sample cartridges were pre-spiked with Fluoranthene-d10 and Benzo(a)Pyrene-d12 on 01/31/2022

Recovery of surrogate Pyrene-d10 was above specified control limits in sample 20220202-03-SE-SAM1. Data is reported as qualified.

The Relative Percent Difference (RPD) of the LCS/LCSD exceeded acceptance limits for Indeno(1,2,3-c,d)pyrene.

## Definition of Data Qualifying Flags

Seven qualifiers may have been used on the data analysis sheets and indicate as follows:
E - Exceeds instrument calibration range.

Q - Exceeds quality control limits.
S - Saturated peak.
J - Estimated value.
B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).
U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.
N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:
a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

2/22/2022
Mr. Brian O'Shea
ERM Northern Division (formerly ERM-North Central)
125 South Wacker
Suite 2500
Chicago IL 60606

Project Name: Champaign 5th St.
Project #: 0529307
Workorder #: 2202190

Dear Mr. Brian O'Shea

The following report includes the data for the above referenced project for sample(s) received on 2/10/2022 at Eurofins Air Toxics LLC.

The data and associated QC analyzed by Modified TO-13A are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics LLC. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kathleen Kaneko at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kathleen Kaneko

Project Manager

**LABORATORY NARRATIVE**
**Modified TO-13A**
**ERM Northern Division (formerly ERM-North Central)**
**Workorder# 2202190**

Six PUF/XAD Cartridge-Low Volume samples were received on February 10, 2022. The laboratory performed the analysis for polycyclic aromatic hydrocarbons in air by modified EPA Method TO-13A. The PUF/XAD samples were extracted using Pressurized Fluid Extraction (PFE) by EPA Method 3545A. The sample extract was then concentrated to 1.0 mL and analyzed by GC/MS in the full scan mode.

To meet the quality control objectives outlined in Method TO-13A, a field blank is required for each sampling episode. If field blanks are not provided to the laboratory, any attendant risk to data quality is the responsibility of the data user.

The frequency of matrix spikes are determined by the different monitoring programs. Matrix spikes are not included in the routine calibration specifications for TO-13A.

| ***Requirement*** | ***TO-13A*** | ***ATL Modifications*** |
|---|---|---|
| Initial Calibration | Calibration range: 0.1-2.5 ug/mL in Hexane | Calibration range: 1.0-500 ug/mL in Methylene chloride |
| Method Blank | <MDL | <Reporting limit |
| Surrogate Recoveries | 60-120% | 50-150% for Field Surrogates<br>Fluoranthene-d10 and Benzo(a)pyrene-d12 |

## Receiving Notes

There were no receiving discrepancies.

## Analytical Notes

The sample cartridges were pre-spiked with Fluoranthene-d10 and Benzo(a)Pyrene-d12 on 01/31/2022

## Definition of Data Qualifying Flags

Seven qualifiers may have been used on the data analysis sheets and indicate as follows:
E - Exceeds instrument calibration range.
Q - Exceeds quality control limits.
S - Saturated peak.
J - Estimated value.
B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).
U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.
N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:

a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

2/25/2022
Mr. Brian O'Shea
ERM Northern Division (formerly ERM-North Central)
125 South Wacker
Suite 2500
Chicago IL 60606

Project Name: Champaign 5th St.
Project #: 0529307
Workorder #: 2202342

Dear Mr. Brian O'Shea

The following report includes the data for the above referenced project for sample(s) received on 2/15/2022 at Eurofins Air Toxics LLC.

The data and associated QC analyzed by Modified TO-13A are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics LLC. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kathleen Kaneko at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kathleen Kaneko

Project Manager

**LABORATORY NARRATIVE**
**Modified TO-13A**
**ERM Northern Division (formerly ERM-North Central)**
**Workorder# 2202342**

Six PUF/XAD Cartridge-Low Volume samples were received on February 15, 2022. The laboratory performed the analysis for polycyclic aromatic hydrocarbons in air by modified EPA Method TO-13A. The PUF/XAD samples were extracted using Pressurized Fluid Extraction (PFE) by EPA Method 3545A. The sample extract was then concentrated to 1.0 mL and analyzed by GC/MS in the full scan mode.

To meet the quality control objectives outlined in Method TO-13A, a field blank is required for each sampling episode. If field blanks are not provided to the laboratory, any attendant risk to data quality is the responsibility of the data user.

The frequency of matrix spikes are determined by the different monitoring programs. Matrix spikes are not included in the routine calibration specifications for TO-13A.

| ***Requirement*** | ***TO-13A*** | ***ATL Modifications*** |
|---|---|---|
| Initial Calibration | Calibration range: 0.1-2.5 ug/mL in Hexane | Calibration range: 1.0-500 ug/mL in Methylene chloride |
| Method Blank | <MDL | <Reporting limit |
| Surrogate Recoveries | 60-120% | 50-150% for Field Surrogates<br>Fluoranthene-d10 and Benzo(a)pyrene-d12 |

## Receiving Notes

There were no receiving discrepancies.

## Analytical Notes

The sample cartridges were pre-spiked with Fluoranthene-d10 and Benzo(a)Pyrene-d12 on 02/07/2022.

## Definition of Data Qualifying Flags

Seven qualifiers may have been used on the data analysis sheets and indicate as follows:
E - Exceeds instrument calibration range.
Q - Exceeds quality control limits.
S - Saturated peak.
J - Estimated value.
B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).
U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.
N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:

a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

2/28/2022
Mr. Brian O'Shea
ERM Northern Division (formerly ERM-North Central)
125 South Wacker
Suite 2500
Chicago IL 60606

Project Name: Champaign 5th St.
Project #: 0529307
Workorder #: 2202403

Dear Mr. Brian O'Shea

The following report includes the data for the above referenced project for sample(s) received on 2/17/2022 at Eurofins Air Toxics LLC.

The data and associated QC analyzed by Modified TO-13A are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics LLC. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kathleen Kaneko at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kathleen Kaneko

Project Manager

**LABORATORY NARRATIVE**
**Modified TO-13A**
**ERM Northern Division (formerly ERM-North Central)**
**Workorder# 2202403**

Six PUF/XAD Cartridge-Low Volume samples were received on February 17, 2022. The laboratory performed the analysis for polycyclic aromatic hydrocarbons in air by modified EPA Method TO-13A. The PUF/XAD samples were extracted using Pressurized Fluid Extraction (PFE) by EPA Method 3545A. The sample extract was then concentrated to 1.0 mL and analyzed by GC/MS in the full scan mode.

To meet the quality control objectives outlined in Method TO-13A, a field blank is required for each sampling episode. If field blanks are not provided to the laboratory, any attendant risk to data quality is the responsibility of the data user.

The frequency of matrix spikes are determined by the different monitoring programs. Matrix spikes are not included in the routine calibration specifications for TO-13A.

| ***Requirement*** | ***TO-13A*** | ***ATL Modifications*** |
|---|---|---|
| Initial Calibration | Calibration range: 0.1-2.5 ug/mL in Hexane | Calibration range: 1.0-500 ug/mL in Methylene chloride |
| Method Blank | <MDL | <Reporting limit |
| Surrogate Recoveries | 60-120% | 50-150% for Field Surrogates<br>Fluoranthene-d10 and Benzo(a)pyrene-d12 |

## Receiving Notes

There were no receiving discrepancies.

## Analytical Notes

The sample cartridges were pre-spiked with Fluoranthene-d10 and Benzo(a)Pyrene-d12 on 02/07/2022.

## Definition of Data Qualifying Flags

Seven qualifiers may have been used on the data analysis sheets and indicate as follows:
E - Exceeds instrument calibration range.
Q - Exceeds quality control limits.
S - Saturated peak.
J - Estimated value.
B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).
U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.
N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:

a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

3/1/2022
Mr. Brian O'Shea
ERM Northern Division (formerly ERM-North Central)
125 South Wacker
Suite 2500
Chicago IL 60606

Project Name: Champaign 5th St.
Project #: 0529307
Workorder #: 2202502

Dear Mr. Brian O'Shea

The following report includes the data for the above referenced project for sample(s) received on 2/22/2022 at Eurofins Air Toxics LLC.

The data and associated QC analyzed by Modified TO-13A are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics LLC. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kathleen Kaneko at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kathleen Kaneko

Project Manager

**LABORATORY NARRATIVE**
**Modified TO-13A**
**ERM Northern Division (formerly ERM-North Central)**
**Workorder# 2202502**

Six PUF/XAD Cartridge-Low Volume samples were received on February 22, 2022. The laboratory performed the analysis for polycyclic aromatic hydrocarbons in air by modified EPA Method TO-13A. The PUF/XAD samples were extracted using Pressurized Fluid Extraction (PFE) by EPA Method 3545A. The sample extract was then concentrated to 1.0 mL and analyzed by GC/MS in the full scan mode.

To meet the quality control objectives outlined in Method TO-13A, a field blank is required for each sampling episode. If field blanks are not provided to the laboratory, any attendant risk to data quality is the responsibility of the data user.

The frequency of matrix spikes are determined by the different monitoring programs. Matrix spikes are not included in the routine calibration specifications for TO-13A.

| ***Requirement*** | ***TO-13A*** | ***ATL Modifications*** |
|---|---|---|
| Initial Calibration | Calibration range: 0.1-2.5 ug/mL in Hexane | Calibration range: 1.0-500 ug/mL in Methylene chloride |
| Method Blank | <MDL | <Reporting limit |
| Surrogate Recoveries | 60-120% | 50-150% for Field Surrogates<br>Fluoranthene-d10 and Benzo(a)pyrene-d12 |

## Receiving Notes

There were no receiving discrepancies.

## Analytical Notes

The sample cartridges were pre-spiked with Fluoranthene-d10 and Benzo(a)Pyrene-d12 on 02/14/2022.

## Definition of Data Qualifying Flags

Seven qualifiers may have been used on the data analysis sheets and indicate as follows:
E - Exceeds instrument calibration range.
Q - Exceeds quality control limits.
S - Saturated peak.
J - Estimated value.
B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).
U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.
N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:

a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

3/4/2022
Mr. Brian O'Shea
ERM Northern Division (formerly ERM-North Central)
125 South Wacker
Suite 2500
Chicago IL 60606

Project Name: Champaign 5th St.
Project #: 0529307
Workorder #: 2202582

Dear Mr. Brian O'Shea

The following report includes the data for the above referenced project for sample(s) received on 2/24/2022 at Eurofins Air Toxics LLC.

The data and associated QC analyzed by Modified TO-13A are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics LLC. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kathleen Kaneko at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kathleen Kaneko

Project Manager

**LABORATORY NARRATIVE**
**Modified TO-13A**
**ERM Northern Division (formerly ERM-North Central)**
**Workorder# 2202582**

Six PUF/XAD Cartridge-Low Volume samples were received on February 24, 2022. The laboratory performed the analysis for polycyclic aromatic hydrocarbons in air by modified EPA Method TO-13A. The PUF/XAD samples were extracted using Pressurized Fluid Extraction (PFE) by EPA Method 3545A. The sample extract was then concentrated to 1.0 mL and analyzed by GC/MS in the full scan mode.

To meet the quality control objectives outlined in Method TO-13A, a field blank is required for each sampling episode. If field blanks are not provided to the laboratory, any attendant risk to data quality is the responsibility of the data user.

The frequency of matrix spikes are determined by the different monitoring programs. Matrix spikes are not included in the routine calibration specifications for TO-13A.

| ***Requirement*** | ***TO-13A*** | ***ATL Modifications*** |
|---|---|---|
| Initial Calibration | Calibration range: 0.1-2.5 ug/mL in Hexane | Calibration range: 1.0-500 ug/mL in Methylene chloride |
| Method Blank | <MDL | <Reporting limit |
| Surrogate Recoveries | 60-120% | 50-150% for Field Surrogates<br>Fluoranthene-d10 and Benzo(a)pyrene-d12 |

**Receiving Notes**

There were no receiving discrepancies.

**Analytical Notes**

The sample cartridges were pre-spiked with Fluoranthene-d10 and Benzo(a)Pyrene-d12 on 02/14/2022.

All Quality Control Limit exceedances and affected sample results are noted by flags. Each flag is defined at the bottom of this Case Narrative and on each Sample Result Summary page. Target compound non-detects in the samples that are associated with high bias in QC analyses have not been flagged.

The recovery for Anthracene in the LCS was outside the laboratory control limits. Due to the nature of PUF/XAD2 extraction, it is not possible to re-extract the associated samples. All other LCS recoveries were within allowed limits.

**Definition of Data Qualifying Flags**

Seven qualifiers may have been used on the data analysis sheets and indicate as follows:
E - Exceeds instrument calibration range.
Q - Exceeds quality control limits.
S - Saturated peak.

J - Estimated value.
B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).
U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.
N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:
a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

Mr. Brian O'Shea
ERM Northern Division (formerly ERM-North Central)
125 South Wacker
Suite 2500
Chicago IL 60606

Project Name: Champaign 5th St.
Project #: 0529307
Workorder #: 2203008

Dear Mr. Brian O'Shea

The following report includes the data for the above referenced project for sample(s) received on 3/1/2022 at Eurofins Air Toxics LLC.

The data and associated QC analyzed by Modified TO-13A are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics LLC. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kathleen Kaneko at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kathleen Kaneko

Project Manager

**LABORATORY NARRATIVE**
**Modified TO-13A**
**ERM Northern Division (formerly ERM-North Central)**
**Workorder# 2203008**

Six PUF/XAD Cartridge-Low Volume samples were received on March 01, 2022. The laboratory performed the analysis for polycyclic aromatic hydrocarbons in air by modified EPA Method TO-13A. The PUF/XAD samples were extracted using Pressurized Fluid Extraction (PFE) by EPA Method 3545A. The sample extract was then concentrated to 1.0 mL and analyzed by GC/MS in the full scan mode.

To meet the quality control objectives outlined in Method TO-13A, a field blank is required for each sampling episode. If field blanks are not provided to the laboratory, any attendant risk to data quality is the responsibility of the data user.

The frequency of matrix spikes are determined by the different monitoring programs. Matrix spikes are not included in the routine calibration specifications for TO-13A.

| ***Requirement*** | ***TO-13A*** | ***ATL Modifications*** |
|---|---|---|
| Initial Calibration | Calibration range: 0.1-2.5 ug/mL in Hexane | Calibration range: 1.0-500 ug/mL in Methylene chloride |
| Method Blank | <MDL | <Reporting limit |
| Surrogate Recoveries | 60-120% | 50-150% for Field Surrogates<br>Fluoranthene-d10 and Benzo(a)pyrene-d12 |

## Receiving Notes

A Temperature Blank was not included with the shipment. Temperature was measured on a representative sample and was not within 4±2 °C. Coolant in the form of blue ice was present. Analysis proceeded.

## Analytical Notes

The sample cartridges were pre-spiked with Fluoranthene-d10 and Benzo(a)Pyrene-d12 on 02/21/2022.

The recovery for Benzo(b)fluoranthene in the LCSD was outside the laboratory control limits. Due to the nature of PUF/XAD2 extraction, it is not possible to re-extract the associated samples. All other LCSD recoveries were within allowed limits.

## Definition of Data Qualifying Flags

Seven qualifiers may have been used on the data analysis sheets and indicate as follows:
E - Exceeds instrument calibration range.
Q - Exceeds quality control limits.
S - Saturated peak.
J - Estimated value.
B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).

U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.
N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:
a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

3/14/2022
Mr. Brian O'Shea
ERM Northern Division (formerly ERM-North Central)
125 South Wacker
Suite 2500
Chicago IL 60606

Project Name: Champaign 5th St.
Project #: 0529307
Workorder #: 2203079

Dear Mr. Brian O'Shea

The following report includes the data for the above referenced project for sample(s) received on 3/3/2022 at Eurofins Air Toxics LLC.

The data and associated QC analyzed by Modified TO-13A are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics LLC. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kathleen Kaneko at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kathleen Kaneko

Project Manager

**LABORATORY NARRATIVE**
**Modified TO-13A**
**ERM Northern Division (formerly ERM-North Central)**
**Workorder# 2203079**

Six PUF/XAD Cartridge-Low Volume samples were received on March 03, 2022. The laboratory performed the analysis for polycyclic aromatic hydrocarbons in air by modified EPA Method TO-13A. The PUF/XAD samples were extracted using Pressurized Fluid Extraction (PFE) by EPA Method 3545A. The sample extract was then concentrated to 1.0 mL and analyzed by GC/MS in the full scan mode.

To meet the quality control objectives outlined in Method TO-13A, a field blank is required for each sampling episode. If field blanks are not provided to the laboratory, any attendant risk to data quality is the responsibility of the data user.

The frequency of matrix spikes are determined by the different monitoring programs. Matrix spikes are not included in the routine calibration specifications for TO-13A.

| ***Requirement*** | ***TO-13A*** | ***ATL Modifications*** |
|---|---|---|
| Initial Calibration | Calibration range: 0.1-2.5 ug/mL in Hexane | Calibration range: 1.0-500 ug/mL in Methylene chloride |
| Method Blank | <MDL | <Reporting limit |
| Surrogate Recoveries | 60-120% | 50-150% for Field Surrogates<br>Fluoranthene-d10 and Benzo(a)pyrene-d12 |

## Receiving Notes

There were no receiving discrepancies.

## Analytical Notes

The sample cartridges were pre-spiked with Fluoranthene-d10 and Benzo(a)Pyrene-d12 on 02/21/2022.

The recovery for Anthracene in the LCS and LCSD was outside the laboratory control limits. Due to the nature of PUF/XAD2 extraction, it is not possible to re-extract the associated samples. All other LCS and LCSD recoveries were within allowed limits.

## Definition of Data Qualifying Flags

Seven qualifiers may have been used on the data analysis sheets and indicate as follows:
E - Exceeds instrument calibration range.
Q - Exceeds quality control limits.
S - Saturated peak.
J - Estimated value.
B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).
U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.

N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:

a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

Mr. Brian O'Shea
ERM Northern Division (formerly ERM-North Central)
125 South Wacker
Suite 2500
Chicago IL 60606

Project Name: Champaign 5th St.
Project #: 0529307
Workorder #: 2203184

Dear Mr. Brian O'Shea

The following report includes the data for the above referenced project for sample(s) received on 3/8/2022 at Eurofins Air Toxics LLC.

The data and associated QC analyzed by Modified TO-13A are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics LLC. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kathleen Kaneko at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kathleen Kaneko

Project Manager

**LABORATORY NARRATIVE**
**Modified TO-13A**
**ERM Northern Division (formerly ERM-North Central)**
**Workorder# 2203184**

Six PUF/XAD Cartridge-Low Volume samples were received on March 08, 2022. The laboratory performed the analysis for polycyclic aromatic hydrocarbons in air by modified EPA Method TO-13A. The PUF/XAD samples were extracted using Pressurized Fluid Extraction (PFE) by EPA Method 3545A. The sample extract was then concentrated to 1.0 mL and analyzed by GC/MS in the full scan mode.

To meet the quality control objectives outlined in Method TO-13A, a field blank is required for each sampling episode. If field blanks are not provided to the laboratory, any attendant risk to data quality is the responsibility of the data user.

The frequency of matrix spikes are determined by the different monitoring programs. Matrix spikes are not included in the routine calibration specifications for TO-13A.

| ***Requirement*** | ***TO-13A*** | ***ATL Modifications*** |
|---|---|---|
| Initial Calibration | Calibration range: 0.1-2.5 ug/mL in Hexane | Calibration range: 1.0-500 ug/mL in Methylene chloride |
| Method Blank | <MDL | <Reporting limit |
| Surrogate Recoveries | 60-120% | 50-150% for Field Surrogates<br>Fluoranthene-d10 and Benzo(a)pyrene-d12 |

## Receiving Notes

There were no receiving discrepancies.

## Analytical Notes

The sample cartridges were pre-spiked with Fluoranthene-d10 and Benzo(a)Pyrene-d12 on 02/28/2022.

All Quality Control Limit exceedances and affected sample results are noted by flags. Each flag is defined at the bottom of this Case Narrative and on each Sample Result Summary page. Target compound non-detects in the samples that are associated with high bias in QC analyses have not been flagged.

The recoveries for Benzo(b)fluoranthene and Benzo(a)pyrene in the LCSD were outside the laboratory control limits. Due to the nature of PUF/XAD2 extraction, it is not possible to re-extract the associated samples. All other LCSD recoveries were within allowed limits.

## Definition of Data Qualifying Flags

Seven qualifiers may have been used on the data analysis sheets and indicate as follows:
E - Exceeds instrument calibration range.
Q - Exceeds quality control limits.
S - Saturated peak.

J - Estimated value.
B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).
U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.
N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:
a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

Mr. Brian O'Shea
ERM Northern Division (formerly ERM-North Central)
125 South Wacker
Suite 2500
Chicago IL 60606

Project Name: Champaign 5th Street
Project #: 0529307
Workorder #: 2203257

Dear Mr. Brian O'Shea

The following report includes the data for the above referenced project for sample(s) received on 3/10/2022 at Eurofins Air Toxics LLC.

The data and associated QC analyzed by Modified TO-13A are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics LLC. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kathleen Kaneko at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kathleen Kaneko

Project Manager

**LABORATORY NARRATIVE**
**Modified TO-13A**
**ERM Northern Division (formerly ERM-North Central)**
**Workorder# 2203257**

Six PUF/XAD Cartridge-Low Volume samples were received on March 10, 2022. The laboratory performed the analysis for polycyclic aromatic hydrocarbons in air by modified EPA Method TO-13A. The PUF/XAD samples were extracted using Pressurized Fluid Extraction (PFE) by EPA Method 3545A. The sample extract was then concentrated to 1.0 mL and analyzed by GC/MS in the full scan mode.

To meet the quality control objectives outlined in Method TO-13A, a field blank is required for each sampling episode. If field blanks are not provided to the laboratory, any attendant risk to data quality is the responsibility of the data user.

The frequency of matrix spikes are determined by the different monitoring programs. Matrix spikes are not included in the routine calibration specifications for TO-13A.

| ***Requirement*** | ***TO-13A*** | ***ATL Modifications*** |
|---|---|---|
| Initial Calibration | Calibration range: 0.1-2.5 ug/mL in Hexane | Calibration range: 1.0-500 ug/mL in Methylene chloride |
| Method Blank | <MDL | <Reporting limit |
| Surrogate Recoveries | 60-120% | 50-150% for Field Surrogates<br>Fluoranthene-d10 and Benzo(a)pyrene-d12 |

## Receiving Notes

There were no receiving discrepancies.

## Analytical Notes

The sample cartridges were pre-spiked with Fluoranthene-d10 and Benzo(a)Pyrene-d12 on 01/03/2022 and 01/10/2022.

## Definition of Data Qualifying Flags

Seven qualifiers may have been used on the data analysis sheets and indicate as follows:
E - Exceeds instrument calibration range.
Q - Exceeds quality control limits.
S - Saturated peak.
J - Estimated value.
B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).
U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.
N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:

a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

Mr. Brian O'Shea
ERM Northern Division (formerly ERM-North Central)
125 South Wacker
Suite 2500
Chicago IL 60606

Project Name: Champaign 5th Street
Project #: 0529307
Workorder #: 2203359

Dear Mr. Brian O'Shea

The following report includes the data for the above referenced project for sample(s) received on 3/15/2022 at Eurofins Air Toxics LLC.

The data and associated QC analyzed by Modified TO-13A are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics LLC. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kathleen Kaneko at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kathleen Kaneko

Project Manager

**LABORATORY NARRATIVE**
**Modified TO-13A**
**ERM Northern Division (formerly ERM-North Central)**
**Workorder# 2203359**

Six PUF/XAD Cartridge-Low Volume samples were received on March 15, 2022. The laboratory performed the analysis for polycyclic aromatic hydrocarbons in air by modified EPA Method TO-13A. The PUF/XAD samples were extracted using Pressurized Fluid Extraction (PFE) by EPA Method 3545A. The sample extract was then concentrated to 1.0 mL and analyzed by GC/MS in the full scan mode.

To meet the quality control objectives outlined in Method TO-13A, a field blank is required for each sampling episode. If field blanks are not provided to the laboratory, any attendant risk to data quality is the responsibility of the data user.

The frequency of matrix spikes are determined by the different monitoring programs. Matrix spikes are not included in the routine calibration specifications for TO-13A.

| ***Requirement*** | ***TO-13A*** | ***ATL Modifications*** |
|---|---|---|
| Initial Calibration | Calibration range: 0.1-2.5 ug/mL in Hexane | Calibration range: 1.0-500 ug/mL in Methylene chloride |
| Method Blank | <MDL | <Reporting limit |
| Surrogate Recoveries | 60-120% | 50-150% for Field Surrogates<br>Fluoranthene-d10 and Benzo(a)pyrene-d12 |

**Receiving Notes**

There were no receiving discrepancies.

**Analytical Notes**

The sample cartridges were pre-spiked with Fluoranthene-d10 and Benzo(a)Pyrene-d12 on 02/28/2022.

The recovery for Indeno(1,2,3-c,d)pyrene in the LCSD was outside the laboratory control limits. Due to the nature of PUF/XAD2 extraction, it is not possible to re-extract the associated samples. All other LCSD recoveries were within allowed limits.

The Relative Percent Difference (RPD) of the LCS/LCSD exceeded acceptance limits for 2-Chloronaphthalene, Pyrene and Indeno(1,2,3-c,d)pyrene.

Recovery of surrogate Pyrene-d10 was above specified control limits in samples 20220309-11-NE-SAM2 and Lab Blank. Data is reported as qualified.

**Definition of Data Qualifying Flags**

Seven qualifiers may have been used on the data analysis sheets and indicate as follows:
E - Exceeds instrument calibration range.
Q - Exceeds quality control limits.

S - Saturated peak.
J - Estimated value.
B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).
U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.
N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:
a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

Project Name: Champaign 5th Street
Project #: 0529307
Workorder #: 2203451

Dear Mr. Brian O'Shea

The following report includes the data for the above referenced project for sample(s) received on 3/17/2022 at Eurofins Air Toxics LLC.

The data and associated QC analyzed by Modified TO-13A are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics LLC. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kathleen Kaneko at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kathleen Kaneko

Project Manager

**LABORATORY NARRATIVE**
**Modified TO-13A**
**ERM Northern Division (formerly ERM-North Central)**
**Workorder# 2203451**

Six PUF/XAD Cartridge-Low Volume samples were received on March 17, 2022. The laboratory performed the analysis for polycyclic aromatic hydrocarbons in air by modified EPA Method TO-13A. The PUF/XAD samples were extracted using Pressurized Fluid Extraction (PFE) by EPA Method 3545A. The sample extract was then concentrated to 1.0 mL and analyzed by GC/MS in the full scan mode.

To meet the quality control objectives outlined in Method TO-13A, a field blank is required for each sampling episode. If field blanks are not provided to the laboratory, any attendant risk to data quality is the responsibility of the data user.

The frequency of matrix spikes are determined by the different monitoring programs. Matrix spikes are not included in the routine calibration specifications for TO-13A.

| ***Requirement*** | ***TO-13A*** | ***ATL Modifications*** |
|---|---|---|
| Initial Calibration | Calibration range: 0.1-2.5 ug/mL in Hexane | Calibration range: 1.0-500 ug/mL in Methylene chloride |
| Method Blank | <MDL | <Reporting limit |
| Surrogate Recoveries | 60-120% | 50-150% for Field Surrogates<br>Fluoranthene-d10 and Benzo(a)pyrene-d12 |

## Receiving Notes

There were no receiving discrepancies.

## Analytical Notes

The sample cartridges were pre-spiked with Fluoranthene-d10 and Benzo(a)Pyrene-d12 on 03/10/2022.

Recovery of surrogate Pyrene-d10 was above specified control limits in sample Lab Blank. Data is reported as qualified.

## Definition of Data Qualifying Flags

Seven qualifiers may have been used on the data analysis sheets and indicate as follows:
E - Exceeds instrument calibration range.
Q - Exceeds quality control limits.
S - Saturated peak.
J - Estimated value.
B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).
U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.
N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:

a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

Mr. Brian O'Shea
ERM Northern Division (formerly ERM-North Central)
125 South Wacker
Suite 2500
Chicago IL 60606

Project Name: Champaign 5th Street
Project #: 0529307
Workorder #: 2203578

Dear Mr. Brian O'Shea

The following report includes the data for the above referenced project for sample(s) received on 3/22/2022 at Eurofins Air Toxics LLC.

The data and associated QC analyzed by Modified TO-13A are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics LLC. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kathleen Kaneko at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kathleen Kaneko

Project Manager

**LABORATORY NARRATIVE**
**Modified TO-13A**
**ERM Northern Division (formerly ERM-North Central)**
**Workorder# 2203578**

Six PUF/XAD Cartridge-Low Volume samples were received on March 22, 2022. The laboratory performed the analysis for polycyclic aromatic hydrocarbons in air by modified EPA Method TO-13A. The PUF/XAD samples were extracted using Pressurized Fluid Extraction (PFE) by EPA Method 3545A. The sample extract was then concentrated to 1.0 mL and analyzed by GC/MS in the full scan mode.

To meet the quality control objectives outlined in Method TO-13A, a field blank is required for each sampling episode. If field blanks are not provided to the laboratory, any attendant risk to data quality is the responsibility of the data user.

The frequency of matrix spikes are determined by the different monitoring programs. Matrix spikes are not included in the routine calibration specifications for TO-13A.

| ***Requirement*** | ***TO-13A*** | ***ATL Modifications*** |
|---|---|---|
| Initial Calibration | Calibration range: 0.1-2.5 ug/mL in Hexane | Calibration range: 1.0-500 ug/mL in Methylene chloride |
| Method Blank | <MDL | <Reporting limit |
| Surrogate Recoveries | 60-120% | 50-150% for Field Surrogates<br>Fluoranthene-d10 and Benzo(a)pyrene-d12 |

## Receiving Notes

There were no receiving discrepancies.

## Analytical Notes

The sample cartridges were pre-spiked with Fluoranthene-d10 and Benzo(a)Pyrene-d12 on 03/10/2022.

## Definition of Data Qualifying Flags

Seven qualifiers may have been used on the data analysis sheets and indicate as follows:
E - Exceeds instrument calibration range.
Q - Exceeds quality control limits.
S - Saturated peak.
J - Estimated value.
B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).
U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.
N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:

a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

Mr. Brian O'Shea
ERM Northern Division (formerly ERM-North Central)
125 South Wacker
Suite 2500
Chicago IL 60606

Project Name: Champaign 5th St.
Project #: 0529307
Workorder #: 2203656

Dear Mr. Brian O'Shea

The following report includes the data for the above referenced project for sample(s) received on 3/24/2022 at Eurofins Air Toxics LLC.

The data and associated QC analyzed by Modified TO-13A are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics LLC. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kathleen Kaneko at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kathleen Kaneko

Project Manager

**LABORATORY NARRATIVE**
**Modified TO-13A**
**ERM Northern Division (formerly ERM-North Central)**
**Workorder# 2203656**

Six PUF/XAD Cartridge-Low Volume samples were received on March 24, 2022. The laboratory performed the analysis for polycyclic aromatic hydrocarbons in air by modified EPA Method TO-13A. The PUF/XAD samples were extracted using Pressurized Fluid Extraction (PFE) by EPA Method 3545A. The sample extract was then concentrated to 1.0 mL and analyzed by GC/MS in the full scan mode.

To meet the quality control objectives outlined in Method TO-13A, a field blank is required for each sampling episode. If field blanks are not provided to the laboratory, any attendant risk to data quality is the responsibility of the data user.

The frequency of matrix spikes are determined by the different monitoring programs. Matrix spikes are not included in the routine calibration specifications for TO-13A.

| ***Requirement*** | ***TO-13A*** | ***ATL Modifications*** |
|---|---|---|
| Initial Calibration | Calibration range: 0.1-2.5 ug/mL in Hexane | Calibration range: 1.0-500 ug/mL in Methylene chloride |
| Method Blank | <MDL | <Reporting limit |
| Surrogate Recoveries | 60-120% | 50-150% for Field Surrogates<br>Fluoranthene-d10 and Benzo(a)pyrene-d12 |

**Receiving Notes**

There were no receiving discrepancies.

**Analytical Notes**

The sample cartridges were pre-spiked with Fluoranthene-d10 and Benzo(a)Pyrene-d12 on 03/15/2022.

Recovery of surrogate Fluorene-d10 was below specified control limits in sample 20220321-23-SE-SAM3. Data is reported as qualified.

The recovery for Anthracene in the LCS was outside the laboratory control limits. Due to the nature of PUF/XAD2 extraction, it is not possible to re-extract the associated samples. All other LCS recoveries were within allowed limits.

**Definition of Data Qualifying Flags**

Seven qualifiers may have been used on the data analysis sheets and indicate as follows:
E - Exceeds instrument calibration range.
Q - Exceeds quality control limits.
S - Saturated peak.
J - Estimated value.
B - Compound present in laboratory blank greater than reporting limit (background subtraction not

performed).
U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.
N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:
a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

Mr. Brian O'Shea
ERM Northern Division (formerly ERM-North Central)
125 South Wacker
Suite 2500
Chicago IL 60606

Project Name: Champaign 5th St.
Project #: 0529307
Workorder #: 2203768

Dear Mr. Brian O'Shea

The following report includes the data for the above referenced project for sample(s) received on 3/29/2022 at Eurofins Air Toxics LLC.

The data and associated QC analyzed by Modified TO-13A are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics LLC. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kathleen Kaneko at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kathleen Kaneko

Project Manager

**LABORATORY NARRATIVE**
**Modified TO-13A**
**ERM Northern Division (formerly ERM-North Central)**
**Workorder# 2203768**

Six PUF/XAD Cartridge-Low Volume samples were received on March 29, 2022. The laboratory performed the analysis for polycyclic aromatic hydrocarbons in air by modified EPA Method TO-13A. The PUF/XAD samples were extracted using Pressurized Fluid Extraction (PFE) by EPA Method 3545A. The sample extract was then concentrated to 1.0 mL and analyzed by GC/MS in the full scan mode.

To meet the quality control objectives outlined in Method TO-13A, a field blank is required for each sampling episode. If field blanks are not provided to the laboratory, any attendant risk to data quality is the responsibility of the data user.

The frequency of matrix spikes are determined by the different monitoring programs. Matrix spikes are not included in the routine calibration specifications for TO-13A.

| ***Requirement*** | ***TO-13A*** | ***ATL Modifications*** |
|---|---|---|
| Initial Calibration | Calibration range: 0.1-2.5 ug/mL in Hexane | Calibration range: 1.0-500 ug/mL in Methylene chloride |
| Method Blank | <MDL | <Reporting limit |
| Surrogate Recoveries | 60-120% | 50-150% for Field Surrogates<br>Fluoranthene-d10 and Benzo(a)pyrene-d12 |

## Receiving Notes

There were no receiving discrepancies.

## Analytical Notes

The sample cartridges were pre-spiked with Fluoranthene-d10 and Benzo(a)Pyrene-d12 on 03/22/2022.

The recoveries for Naphthalene and Indeno(1,2,3-c,d)pyrene in the LCS were outside the laboratory control limits. Due to the nature of PUF/XAD2 extraction, it is not possible to re-extract the associated samples. All other LCS recoveries were within allowed limits.

The recoveries for Fluorene and Indeno(1,2,3-c,d)pyrene in the LCSD were outside the laboratory control limits. Due to the nature of PUF/XAD2 extraction, it is not possible to re-extract the associated samples. All other LCSD recoveries were within allowed limits.

## Definition of Data Qualifying Flags

Seven qualifiers may have been used on the data analysis sheets and indicate as follows:
E - Exceeds instrument calibration range.
Q - Exceeds quality control limits.
S - Saturated peak.
J - Estimated value.

B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).
U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.
N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:
a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

4/7/2022
Mr. Brian O'Shea
ERM Northern Division (formerly ERM-North Central)
125 South Wacker
Suite 2500
Chicago IL 60606

Project Name: Champaign 5th St.
Project #: 0529307
Workorder #: 2203854

Dear Mr. Brian O'Shea

The following report includes the data for the above referenced project for sample(s) received on 3/31/2022 at Eurofins Air Toxics LLC.

The data and associated QC analyzed by Modified TO-13A are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics LLC. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kathleen Kaneko at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kathleen Kaneko

Project Manager

**LABORATORY NARRATIVE**
**Modified TO-13A**
**ERM Northern Division (formerly ERM-North Central)**
**Workorder# 2203854**

Six PUF/XAD Cartridge-Low Volume samples were received on March 31, 2022. The laboratory performed the analysis for polycyclic aromatic hydrocarbons in air by modified EPA Method TO-13A. The PUF/XAD samples were extracted using Pressurized Fluid Extraction (PFE) by EPA Method 3545A. The sample extract was then concentrated to 1.0 mL and analyzed by GC/MS in the full scan mode.

To meet the quality control objectives outlined in Method TO-13A, a field blank is required for each sampling episode. If field blanks are not provided to the laboratory, any attendant risk to data quality is the responsibility of the data user.

The frequency of matrix spikes are determined by the different monitoring programs. Matrix spikes are not included in the routine calibration specifications for TO-13A.

| ***Requirement*** | ***TO-13A*** | ***ATL Modifications*** |
|---|---|---|
| Initial Calibration | Calibration range: 0.1-2.5 ug/mL in Hexane | Calibration range: 1.0-500 ug/mL in Methylene chloride |
| Method Blank | <MDL | <Reporting limit |
| Surrogate Recoveries | 60-120% | 50-150% for Field Surrogates<br>Fluoranthene-d10 and Benzo(a)pyrene-d12 |

## Receiving Notes

A Temperature Blank was included with the shipment. Temperature was measured and was not within 4±2 °C. Coolant in the form of blue ice was present. Analysis proceeded.

## Analytical Notes

The sample cartridges were pre-spiked with Fluoranthene-d10 and Benzo(a)Pyrene-d12 on 03/22/2022.

The recovery for Acenaphthylene in the LCS was outside the laboratory control limits. Due to the nature of PUF/XAD2 extraction, it is not possible to re-extract the associated samples. All other LCS recoveries were within allowed limits.

The Relative Percent Difference (RPD) of the LCS/LCSD exceeded acceptance limits for Acenaphthylene.

## Definition of Data Qualifying Flags

Seven qualifiers may have been used on the data analysis sheets and indicate as follows:
E - Exceeds instrument calibration range.
Q - Exceeds quality control limits.
S - Saturated peak.

J - Estimated value.
B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).
U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.
N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:
a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

Mr. Brian O'Shea
ERM Northern Division (formerly ERM-North Central)
125 South Wacker
Suite 2500
Chicago IL 60606

Project Name: Champaign 5th Street
Project #: 0529307-602
Workorder #: 2204086

Dear Mr. Brian O'Shea

The following report includes the data for the above referenced project for sample(s) received on 4/5/2022 at Eurofins Air Toxics LLC.

The data and associated QC analyzed by Modified TO-13A are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics LLC. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kathleen Kaneko at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kathleen Kaneko

Kathleen Kaneko

**LABORATORY NARRATIVE**
**Modified TO-13A**
**ERM Northern Division (formerly ERM-North Central)**
**Workorder# 2204086**

Six PUF/XAD Cartridge-Low Volume samples were received on April 05, 2022. The laboratory performed the analysis for polycyclic aromatic hydrocarbons in air by modified EPA Method TO-13A. The PUF/XAD samples were extracted using Pressurized Fluid Extraction (PFE) by EPA Method 3545A. The sample extract was then concentrated to 1.0 mL and analyzed by GC/MS in the full scan mode.

To meet the quality control objectives outlined in Method TO-13A, a field blank is required for each sampling episode. If field blanks are not provided to the laboratory, any attendant risk to data quality is the responsibility of the data user.

The frequency of matrix spikes are determined by the different monitoring programs. Matrix spikes are not included in the routine calibration specifications for TO-13A.

| ***Requirement*** | ***TO-13A*** | ***ATL Modifications*** |
|---|---|---|
| Initial Calibration | Calibration range: 0.1-2.5 ug/mL in Hexane | Calibration range: 1.0-500 ug/mL in Methylene chloride |
| Method Blank | <MDL | <Reporting limit |
| Surrogate Recoveries | 60-120% | 50-150% for Field Surrogates<br>Fluoranthene-d10 and Benzo(a)pyrene-d12 |

## Receiving Notes

There were no receiving discrepancies.

## Analytical Notes

The sample cartridges were pre-spiked with Fluoranthene-d10 and Benzo(a)Pyrene-d12 on 03/29/2022.

All Quality Control Limit exceedances and affected sample results are noted by flags. Each flag is defined at the bottom of this Case Narrative and on each Sample Result Summary page. Target compound non-detects in the samples that are associated with high bias in QC analyses have not been flagged.

The recovery for Indeno(1,2,3-c,d)pyrene in the LCS and LCSD was outside the laboratory control limits. Due to the nature of PUF/XAD2 extraction, it is not possible to re-extract the associated samples. All other LCS and LCSD recoveries were within allowed limits.

## Definition of Data Qualifying Flags

Seven qualifiers may have been used on the data analysis sheets and indicate as follows:
E - Exceeds instrument calibration range.
Q - Exceeds quality control limits.
S - Saturated peak.

J - Estimated value.
B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).
U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.
N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:
a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

Project Name: Champaign 5th St.
Project #: 0529307
Workorder #: 2204157

Dear Mr. Brian O'Shea

The following report includes the data for the above referenced project for sample(s) received on 4/7/2022 at Eurofins Air Toxics LLC.

The data and associated QC analyzed by Modified TO-13A are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics LLC. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kathleen Kaneko at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kathleen Kaneko

Project Manager

**LABORATORY NARRATIVE**
**Modified TO-13A**
**ERM Northern Division (formerly ERM-North Central)**
**Workorder# 2204157**

Six PUF/XAD Cartridge-Low Volume samples were received on April 07, 2022. The laboratory performed the analysis for polycyclic aromatic hydrocarbons in air by modified EPA Method TO-13A. The PUF/XAD samples were extracted using Pressurized Fluid Extraction (PFE) by EPA Method 3545A. The sample extract was then concentrated to 1.0 mL and analyzed by GC/MS in the full scan mode.

To meet the quality control objectives outlined in Method TO-13A, a field blank is required for each sampling episode. If field blanks are not provided to the laboratory, any attendant risk to data quality is the responsibility of the data user.

The frequency of matrix spikes are determined by the different monitoring programs. Matrix spikes are not included in the routine calibration specifications for TO-13A.

| ***Requirement*** | ***TO-13A*** | ***ATL Modifications*** |
|---|---|---|
| Initial Calibration | Calibration range: 0.1-2.5 ug/mL in Hexane | Calibration range: 1.0-500 ug/mL in Methylene chloride |
| Method Blank | <MDL | <Reporting limit |
| Surrogate Recoveries | 60-120% | 50-150% for Field Surrogates<br>Fluoranthene-d10 and Benzo(a)pyrene-d12 |

## Receiving Notes

There were no receiving discrepancies.

## Analytical Notes

The sample cartridges were pre-spiked with Fluoranthene-d10 and Benzo(a)Pyrene-d12 on 03/15/2022.

All Quality Control Limit exceedances and affected sample results are noted by flags. Each flag is defined at the bottom of this Case Narrative and on each Sample Result Summary page. Target compound non-detects in the samples that are associated with high bias in QC analyses have not been flagged.

## Definition of Data Qualifying Flags

Seven qualifiers may have been used on the data analysis sheets and indicate as follows:
E - Exceeds instrument calibration range.
Q - Exceeds quality control limits.
S - Saturated peak.
J - Estimated value.
B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).
U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data

page for project specific U-flag definition.
N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:
a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

Mr. Brian O'Shea
ERM Northern Division (formerly ERM-North Central)
125 South Wacker
Suite 2500
Chicago IL 60606

Project Name: Champaign 5th Street
Project #: 0529307
Workorder #: 2204260

Dear Mr. Brian O'Shea

The following report includes the data for the above referenced project for sample(s) received on 4/12/2022 at Eurofins Air Toxics LLC.

The data and associated QC analyzed by Modified TO-13A are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics LLC. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kathleen Kaneko at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kathleen Kaneko

Project Manager

**LABORATORY NARRATIVE**
**Modified TO-13A**
**ERM Northern Division (formerly ERM-North Central)**
**Workorder# 2204260**

Six PUF/XAD Cartridge-Low Volume samples were received on April 12, 2022. The laboratory performed the analysis for polycyclic aromatic hydrocarbons in air by modified EPA Method TO-13A. The PUF/XAD samples were extracted using Pressurized Fluid Extraction (PFE) by EPA Method 3545A. The sample extract was then concentrated to 1.0 mL and analyzed by GC/MS in the full scan mode.

To meet the quality control objectives outlined in Method TO-13A, a field blank is required for each sampling episode. If field blanks are not provided to the laboratory, any attendant risk to data quality is the responsibility of the data user.

The frequency of matrix spikes are determined by the different monitoring programs. Matrix spikes are not included in the routine calibration specifications for TO-13A.

| ***Requirement*** | ***TO-13A*** | ***ATL Modifications*** |
|---|---|---|
| Initial Calibration | Calibration range: 0.1-2.5 ug/mL in Hexane | Calibration range: 1.0-500 ug/mL in Methylene chloride |
| Method Blank | <MDL | <Reporting limit |
| Surrogate Recoveries | 60-120% | 50-150% for Field Surrogates<br>Fluoranthene-d10 and Benzo(a)pyrene-d12 |

**Receiving Notes**

There were no receiving discrepancies.

**Analytical Notes**

The sample cartridges were pre-spiked with Fluoranthene-d10 and Benzo(a)Pyrene-d12 on 03/29/2022.

All Quality Control Limit exceedances and affected sample results are noted by flags. Each flag is defined at the bottom of this Case Narrative and on each Sample Result Summary page. Target compound non-detects in the samples that are associated with high bias in QC analyses have not been flagged.

**Definition of Data Qualifying Flags**

Seven qualifiers may have been used on the data analysis sheets and indicate as follows:
E - Exceeds instrument calibration range.
Q - Exceeds quality control limits.
S - Saturated peak.
J - Estimated value.
B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).
U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data

page for project specific U-flag definition.
N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:
a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

Project Name: Champaign 5th Street
Project #: 0529307
Workorder #: 2204353

Dear Mr. Brian O'Shea

The following report includes the data for the above referenced project for sample(s) received on 4/14/2022 at Eurofins Air Toxics LLC.

The data and associated QC analyzed by Modified TO-13A are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics LLC. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kathleen Kaneko at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kathleen Kaneko

Project Manager

**LABORATORY NARRATIVE**
**Modified TO-13A**
**ERM Northern Division (formerly ERM-North Central)**
**Workorder# 2204353**

Five PUF/XAD Cartridge-Low Volume samples were received on April 14, 2022. The laboratory performed the analysis for polycyclic aromatic hydrocarbons in air by modified EPA Method TO-13A. The PUF/XAD samples were extracted using Pressurized Fluid Extraction (PFE) by EPA Method 3545A. The sample extract was then concentrated to 1.0 mL and analyzed by GC/MS in the full scan mode.

To meet the quality control objectives outlined in Method TO-13A, a field blank is required for each sampling episode. If field blanks are not provided to the laboratory, any attendant risk to data quality is the responsibility of the data user.

The frequency of matrix spikes are determined by the different monitoring programs. Matrix spikes are not included in the routine calibration specifications for TO-13A.

| ***Requirement*** | ***TO-13A*** | ***ATL Modifications*** |
|---|---|---|
| Initial Calibration | Calibration range: 0.1-2.5 ug/mL in Hexane | Calibration range: 1.0-500 ug/mL in Methylene chloride |
| Method Blank | <MDL | <Reporting limit |
| Surrogate Recoveries | 60-120% | 50-150% for Field Surrogates<br>Fluoranthene-d10 and Benzo(a)pyrene-d12 |

## Receiving Notes

There were no receiving discrepancies.

## Analytical Notes

The sample cartridges were pre-spiked with Fluoranthene-d10 and Benzo(a)Pyrene-d12 on 04/08/2022.

All Quality Control Limit exceedances and affected sample results are noted by flags. Each flag is defined at the bottom of this Case Narrative and on each Sample Result Summary page. Target compound non-detects in the samples that are associated with high bias in QC analyses have not been flagged.

The Relative Percent Difference (RPD) of the LCS/LCSD exceeded acceptance limits for Indeno(1,2,3-c,d)pyrene.

## Definition of Data Qualifying Flags

Seven qualifiers may have been used on the data analysis sheets and indicate as follows:
E - Exceeds instrument calibration range.
Q - Exceeds quality control limits.
S - Saturated peak.

J - Estimated value.
B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).
U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.
N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:
a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

Mr. Brian O'Shea
ERM Northern Division (formerly ERM-North Central)
125 South Wacker
Suite 2500
Chicago IL 60606

Project Name: Champaign 5th St.
Project #: 0529307
Workorder #: 2204460

Dear Mr. Brian O'Shea

The following report includes the data for the above referenced project for sample(s) received on 4/19/2022 at Eurofins Air Toxics LLC.

The data and associated QC analyzed by Modified TO-13A are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics LLC. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kathleen Kaneko at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kathleen Kaneko

Project Manager

**LABORATORY NARRATIVE**
**Modified TO-13A**
**ERM Northern Division (formerly ERM-North Central)**
**Workorder# 2204460**

Six PUF/XAD Cartridge-Low Volume samples were received on April 19, 2022. The laboratory performed the analysis for polycyclic aromatic hydrocarbons in air by modified EPA Method TO-13A. The PUF/XAD samples were extracted using Pressurized Fluid Extraction (PFE) by EPA Method 3545A. The sample extract was then concentrated to 1.0 mL and analyzed by GC/MS in the full scan mode.

To meet the quality control objectives outlined in Method TO-13A, a field blank is required for each sampling episode. If field blanks are not provided to the laboratory, any attendant risk to data quality is the responsibility of the data user.

The frequency of matrix spikes are determined by the different monitoring programs. Matrix spikes are not included in the routine calibration specifications for TO-13A.

| ***Requirement*** | ***TO-13A*** | ***ATL Modifications*** |
|---|---|---|
| Initial Calibration | Calibration range: 0.1-2.5 ug/mL in Hexane | Calibration range: 1.0-500 ug/mL in Methylene chloride |
| Method Blank | <MDL | <Reporting limit |
| Surrogate Recoveries | 60-120% | 50-150% for Field Surrogates<br>Fluoranthene-d10 and Benzo(a)pyrene-d12 |

## Receiving Notes

The Chain of Custody (COC) information for sample 20220413-15-SW-SAM2 did not match the entry on the sample tag with regard to sample identification. The information on the COC was used to process and report the sample.

## Analytical Notes

The sample cartridges were pre-spiked with Fluoranthene-d10 and Benzo(a)Pyrene-d12 on 04/08/2022.

All Quality Control Limit exceedances and affected sample results are noted by flags. Each flag is defined at the bottom of this Case Narrative and on each Sample Result Summary page. Target compound non-detects in the samples that are associated with high bias in QC analyses have not been flagged.

## Definition of Data Qualifying Flags

Seven qualifiers may have been used on the data analysis sheets and indicate as follows:
E - Exceeds instrument calibration range.
Q - Exceeds quality control limits.
S - Saturated peak.
J - Estimated value.
B - Compound present in laboratory blank greater than reporting limit (background subtraction not

performed).
U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.
N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:
a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

Mr. Brian O'Shea
ERM Northern Division (formerly ERM-North Central)
125 South Wacker
Suite 2500
Chicago IL 60606

Project Name: Champaign 5th Street
Project #: 0529307
Workorder #: 2204519

Dear Mr. Brian O'Shea

The following report includes the data for the above referenced project for sample(s) received on 4/21/2022 at Eurofins Air Toxics LLC.

The data and associated QC analyzed by Modified TO-13A are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics LLC. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kathleen Kaneko at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kathleen Kaneko

Project Manager

**LABORATORY NARRATIVE**
**Modified TO-13A**
**ERM Northern Division (formerly ERM-North Central)**
**Workorder# 2204519**

Five PUF/XAD Cartridge-Low Volume samples were received on April 21, 2022. The laboratory performed the analysis for polycyclic aromatic hydrocarbons in air by modified EPA Method TO-13A. The PUF/XAD samples were extracted using Pressurized Fluid Extraction (PFE) by EPA Method 3545A. The sample extract was then concentrated to 1.0 mL and analyzed by GC/MS in the full scan mode.

To meet the quality control objectives outlined in Method TO-13A, a field blank is required for each sampling episode. If field blanks are not provided to the laboratory, any attendant risk to data quality is the responsibility of the data user.

The frequency of matrix spikes are determined by the different monitoring programs. Matrix spikes are not included in the routine calibration specifications for TO-13A.

| ***Requirement*** | ***TO-13A*** | ***ATL Modifications*** |
|---|---|---|
| Initial Calibration | Calibration range: 0.1-2.5 ug/mL in Hexane | Calibration range: 1.0-500 ug/mL in Methylene chloride |
| Method Blank | <MDL | <Reporting limit |
| Surrogate Recoveries | 60-120% | 50-150% for Field Surrogates<br>Fluoranthene-d10 and Benzo(a)pyrene-d12 |

## Receiving Notes

A Temperature Blank was not included with the shipment. Temperature was measured on a representative sample and was not within 4±2 °C. Coolant in the form of blue ice was present. Analysis proceeded.

## Analytical Notes

The sample cartridges were pre-spiked with Fluoranthene-d10 and Benzo(a)Pyrene-d12 on 04/12/2022.

All Quality Control Limit exceedances and affected sample results are noted by flags. Each flag is defined at the bottom of this Case Narrative and on each Sample Result Summary page. Target compound non-detects in the samples that are associated with high bias in QC analyses have not been flagged.

## Definition of Data Qualifying Flags

Seven qualifiers may have been used on the data analysis sheets and indicate as follows:
E - Exceeds instrument calibration range.
Q - Exceeds quality control limits.
S - Saturated peak.
J - Estimated value.

B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).
U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.
N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:
a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

Mr. Brian O'Shea
ERM Northern Division (formerly ERM-North Central)
125 South Wacker
Suite 2500
Chicago IL 60606

Project Name: Champaign 5th St.
Project #: 0529307
Workorder #: 2204609

Dear Mr. Brian O'Shea

The following report includes the data for the above referenced project for sample(s) received on 4/26/2022 at Eurofins Air Toxics LLC.

The data and associated QC analyzed by Modified TO-13A are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics LLC. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kathleen Kaneko at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kathleen Kaneko

Kathleen Kaneko

**LABORATORY NARRATIVE**
**Modified TO-13A**
**ERM Northern Division (formerly ERM-North Central)**
**Workorder# 2204609**

Six PUF/XAD Cartridge-Low Volume samples were received on April 26, 2022. The laboratory performed the analysis for polycyclic aromatic hydrocarbons in air by modified EPA Method TO-13A. The PUF/XAD samples were extracted using Pressurized Fluid Extraction (PFE) by EPA Method 3545A. The sample extract was then concentrated to 1.0 mL and analyzed by GC/MS in the full scan mode.

To meet the quality control objectives outlined in Method TO-13A, a field blank is required for each sampling episode. If field blanks are not provided to the laboratory, any attendant risk to data quality is the responsibility of the data user.

The frequency of matrix spikes are determined by the different monitoring programs. Matrix spikes are not included in the routine calibration specifications for TO-13A.

| ***Requirement*** | ***TO-13A*** | ***ATL Modifications*** |
|---|---|---|
| Initial Calibration | Calibration range: 0.1-2.5 ug/mL in Hexane | Calibration range: 1.0-500 ug/mL in Methylene chloride |
| Method Blank | <MDL | <Reporting limit |
| Surrogate Recoveries | 60-120% | 50-150% for Field Surrogates<br>Fluoranthene-d10 and Benzo(a)pyrene-d12 |

**Receiving Notes**

There were no receiving discrepancies.

**Analytical Notes**

The sample cartridges were pre-spiked with Fluoranthene-d10 and Benzo(a)Pyrene-d12 on 04/12/2022.

All Quality Control Limit exceedances and affected sample results are noted by flags. Each flag is defined at the bottom of this Case Narrative and on each Sample Result Summary page. Target compound non-detects in the samples that are associated with high bias in QC analyses have not been flagged.

**Definition of Data Qualifying Flags**

Seven qualifiers may have been used on the data analysis sheets and indicate as follows:
E - Exceeds instrument calibration range.
Q - Exceeds quality control limits.
S - Saturated peak.
J - Estimated value.
B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).
U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data

page for project specific U-flag definition.
N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:
a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

Mr. Brian O'Shea
ERM Northern Division (formerly ERM-North Central)
125 South Wacker
Suite 2500
Chicago IL 60606

Project Name: Champaign 5th St.
Project #: 0529307
Workorder #: 2204689

Dear Mr. Brian O'Shea

The following report includes the data for the above referenced project for sample(s) received on 4/28/2022 at Eurofins Air Toxics LLC.

The data and associated QC analyzed by Modified TO-13A are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics LLC. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kathleen Kaneko at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kathleen Kaneko

Project Manager

**LABORATORY NARRATIVE**
**Modified TO-13A**
**ERM Northern Division (formerly ERM-North Central)**
**Workorder# 2204689**

Six PUF/XAD Cartridge-Low Volume samples were received on April 28, 2022. The laboratory performed the analysis for polycyclic aromatic hydrocarbons in air by modified EPA Method TO-13A. The PUF/XAD samples were extracted using Pressurized Fluid Extraction (PFE) by EPA Method 3545A. The sample extract was then concentrated to 1.0 mL and analyzed by GC/MS in the full scan mode.

To meet the quality control objectives outlined in Method TO-13A, a field blank is required for each sampling episode. If field blanks are not provided to the laboratory, any attendant risk to data quality is the responsibility of the data user.

The frequency of matrix spikes are determined by the different monitoring programs. Matrix spikes are not included in the routine calibration specifications for TO-13A.

| ***Requirement*** | ***TO-13A*** | ***ATL Modifications*** |
|---|---|---|
| Initial Calibration | Calibration range: 0.1-2.5 ug/mL in Hexane | Calibration range: 1.0-500 ug/mL in Methylene chloride |
| Method Blank | <MDL | <Reporting limit |
| Surrogate Recoveries | 60-120% | 50-150% for Field Surrogates<br>Fluoranthene-d10 and Benzo(a)pyrene-d12 |

**Receiving Notes**

There were no receiving discrepancies.

**Analytical Notes**

The sample cartridges were pre-spiked with Fluoranthene-d10 and Benzo(a)Pyrene-d12 on 04/21/2022.

All Quality Control Limit exceedances and affected sample results are noted by flags. Each flag is defined at the bottom of this Case Narrative and on each Sample Result Summary page. Target compound non-detects in the samples that are associated with high bias in QC analyses have not been flagged.

**Definition of Data Qualifying Flags**

Seven qualifiers may have been used on the data analysis sheets and indicate as follows:
E - Exceeds instrument calibration range.
Q - Exceeds quality control limits.
S - Saturated peak.
J - Estimated value.
B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).
U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data

page for project specific U-flag definition.
N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:
a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

Project Name: Champaign 5th St.
Project #: 0529307
Workorder #: 2205027

Dear Mr. Brian O'Shea

The following report includes the data for the above referenced project for sample(s) received on 5/3/2022 at Eurofins Air Toxics LLC.

The data and associated QC analyzed by Modified TO-13A are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics LLC. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kathleen Kaneko at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kathleen Kaneko

**LABORATORY NARRATIVE**
**Modified TO-13A**
**ERM Northern Division (formerly ERM-North Central)**
**Workorder# 2205027**

Six PUF/XAD Cartridge-Low Volume samples were received on May 03, 2022. The laboratory performed the analysis for polycyclic aromatic hydrocarbons in air by modified EPA Method TO-13A. The PUF/XAD samples were extracted using Pressurized Fluid Extraction (PFE) by EPA Method 3545A. The sample extract was then concentrated to 1.0 mL and analyzed by GC/MS in the full scan mode.

To meet the quality control objectives outlined in Method TO-13A, a field blank is required for each sampling episode. If field blanks are not provided to the laboratory, any attendant risk to data quality is the responsibility of the data user.

The frequency of matrix spikes are determined by the different monitoring programs. Matrix spikes are not included in the routine calibration specifications for TO-13A.

| ***Requirement*** | ***TO-13A*** | ***ATL Modifications*** |
|---|---|---|
| Initial Calibration | Calibration range: 0.1-2.5 ug/mL in Hexane | Calibration range: 1.0-500 ug/mL in Methylene chloride |
| Method Blank | <MDL | <Reporting limit |
| Surrogate Recoveries | 60-120% | 50-150% for Field Surrogates<br>Fluoranthene-d10 and Benzo(a)pyrene-d12 |

## Receiving Notes

There were no receiving discrepancies.

## Analytical Notes

The sample cartridges were pre-spiked with Fluoranthene-d10 and Benzo(a)Pyrene-d12 on 04/21/2022.

All Quality Control Limit exceedances and affected sample results are noted by flags. Each flag is defined at the bottom of this Case Narrative and on each Sample Result Summary page. Target compound non-detects in the samples that are associated with high bias in QC analyses have not been flagged.

Recovery of surrogate Pyrene-d10 was above specified control limits in samples 20220427-29-SE-SAM1 and 20220427-29-SW-SAM5. Data is reported as qualified.

## Definition of Data Qualifying Flags

Seven qualifiers may have been used on the data analysis sheets and indicate as follows:
E - Exceeds instrument calibration range.
Q - Exceeds quality control limits.
S - Saturated peak.

J - Estimated value.
B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).
U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.
N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:
a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

Project Name: Champaign 5th St.
Project #: 0529307
Workorder #: 2205029

Dear Mr. Brian O'Shea

The following report includes the data for the above referenced project for sample(s) received on 5/3/2022 at Eurofins Air Toxics LLC.

The data and associated QC analyzed by Modified TO-13A are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics LLC. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kathleen Kaneko at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kathleen Kaneko

Project Manager

**LABORATORY NARRATIVE**
**Modified TO-13A**
**ERM Northern Division (formerly ERM-North Central)**
**Workorder# 2205029**

Six PUF/XAD Cartridge-Low Volume samples were received on May 03, 2022. The laboratory performed the analysis for polycyclic aromatic hydrocarbons in air by modified EPA Method TO-13A. The PUF/XAD samples were extracted using Pressurized Fluid Extraction (PFE) by EPA Method 3545A. The sample extract was then concentrated to 1.0 mL and analyzed by GC/MS in the full scan mode.

To meet the quality control objectives outlined in Method TO-13A, a field blank is required for each sampling episode. If field blanks are not provided to the laboratory, any attendant risk to data quality is the responsibility of the data user.

The frequency of matrix spikes are determined by the different monitoring programs. Matrix spikes are not included in the routine calibration specifications for TO-13A.

| ***Requirement*** | ***TO-13A*** | ***ATL Modifications*** |
|---|---|---|
| Initial Calibration | Calibration range: 0.1-2.5 ug/mL in Hexane | Calibration range: 1.0-500 ug/mL in Methylene chloride |
| Method Blank | <MDL | <Reporting limit |
| Surrogate Recoveries | 60-120% | 50-150% for Field Surrogates<br>Fluoranthene-d10 and Benzo(a)pyrene-d12 |

**Receiving Notes**

There were no receiving discrepancies.

**Analytical Notes**

The sample cartridges were pre-spiked with Fluoranthene-d10 and Benzo(a)Pyrene-d12 on 04/28/2022.

The recoveries for Naphthalene, Acenaphthylene, Acenaphthene, Fluorene, Phenanthrene, Anthracene, Fluoranthene, Pyrene, Chrysene, Benzo(a)anthracene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Dibenz(a,h)anthracene and Benzo(g,h,i)perylene in the LCS were outside the laboratory control limits. Due to the nature of PUF/XAD2 extraction, it is not possible to re-extract the associated samples. All other LCS recoveries were within allowed limits.

The recovery for Naphthalene in the LCSD was outside the laboratory control limits. Due to the nature of PUF/XAD2 extraction, it is not possible to re-extract the associated samples. All other LCSD recoveries were within allowed limits.

The Relative Percent Difference (RPD) of the LCS/LCSD exceeded acceptance limits for Acenaphthylene, Acenaphthene, Fluorene, Phenanthrene, Anthracene, Fluoranthene, Pyrene, Chrysene, Benzo(a)anthracene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-c,d)pyrene, Dibenz(a,h)anthracene and Benzo(g,h,i)perylene.

Recovery of surrogates Fluorene-d10 and Pyrene-d10 were below specified control limits in sample LCS. Data is reported as qualified.

**Definition of Data Qualifying Flags**

Seven qualifiers may have been used on the data analysis sheets and indicate as follows:
E - Exceeds instrument calibration range.
Q - Exceeds quality control limits.
S - Saturated peak.
J - Estimated value.
B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).
U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.
N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:
a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

Project Name: Champaign 5th St.
Project #: 0529307
Workorder #: 2205033

Dear Mr. Brian O'Shea

The following report includes the data for the above referenced project for sample(s) received on 5/3/2022 at Eurofins Air Toxics LLC.

The data and associated QC analyzed by Modified TO-13A are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics LLC. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kathleen Kaneko at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kathleen Kaneko

Project Manager

**LABORATORY NARRATIVE**
**Modified TO-13A**
**ERM Northern Division (formerly ERM-North Central)**
**Workorder# 2205033**

Six PUF/XAD Cartridge-Low Volume samples were received on May 03, 2022. The laboratory performed the analysis for polycyclic aromatic hydrocarbons in air by modified EPA Method TO-13A. The PUF/XAD samples were extracted using Pressurized Fluid Extraction (PFE) by EPA Method 3545A. The sample extract was then concentrated to 1.0 mL and analyzed by GC/MS in the full scan mode.

To meet the quality control objectives outlined in Method TO-13A, a field blank is required for each sampling episode. If field blanks are not provided to the laboratory, any attendant risk to data quality is the responsibility of the data user.

The frequency of matrix spikes are determined by the different monitoring programs. Matrix spikes are not included in the routine calibration specifications for TO-13A.

| ***Requirement*** | ***TO-13A*** | ***ATL Modifications*** |
|---|---|---|
| Initial Calibration | Calibration range: 0.1-2.5 ug/mL in Hexane | Calibration range: 1.0-500 ug/mL in Methylene chloride |
| Method Blank | <MDL | <Reporting limit |
| Surrogate Recoveries | 60-120% | 50-150% for Field Surrogates<br>Fluoranthene-d10 and Benzo(a)pyrene-d12 |

## Receiving Notes

The Chain of Custody (COC) information for samples 20220502-02-NE-SAM2, 20220502-02-SE-SAM3, 20220502-02-NW-SAM4, 20220502-02-SW-SAM5 and 20220502-02-SAM6 did not match the entries on the sample tags with regard to sample identification. Therefore the information on the COC was used to process and report the samples.

## Analytical Notes

The sample cartridges were pre-spiked with Fluoranthene-d10 and Benzo(a)Pyrene-d12 on 04/28/2022.

The Relative Percent Difference (RPD) of the LCS/LCSD exceeded acceptance limits for Indeno(1,2,3-c,d)pyrene.

## Definition of Data Qualifying Flags

Seven qualifiers may have been used on the data analysis sheets and indicate as follows:
E - Exceeds instrument calibration range.
Q - Exceeds quality control limits.
S - Saturated peak.
J - Estimated value.
B - Compound present in laboratory blank greater than reporting limit (background subtraction not

performed).
U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.
N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:
a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

# APPENDIX G INSTRUMENT CALIBRATION FORMS

# *Calibration certificate*

Dräger

| | |
|---|---|
| Instrument: | Dräger X-pid xx00 sensor unit |
| Serial number: | KRMH-0203 |
| Part number: | 6850003 |
| Date of calibration: | 12/13/2021, 14:16:17 |
| Date of functional test: | 12/13/2021, 14:23:54 |
| Mobile App Version: | 1.7.0 |
| Firmware Version: | Release_2,2,3 |
| Hardware Version: | 01a-1 |

Used calibration standards:

| Measurand | Calibrated with | Concentration | Lot number | Part number | Valid until |
|---|---|---|---|---|---|
| Gas | Toluene C7H8 | 10.0 ppm | 1350584 | 3701900 | 07/16/2021 |
| Gas | Isobutylene C4H8 | 10.0 ppm | 1350584 | 3701900 | 07/16/2021 |

Calibration results (set value):

| Sensitivity | Value |
|---|---|
| Seeker | N/A |
| Analysis | 114 % |
| GC factor gradient | 0.0179 |

| Sensitivity | Value |
|---|---|
| GC suction | 22.69 hPa |
| Column | 3009 |

Functional test results:

| Measurement mode | Target compound | Test result |
|---|---|---|
| Seeker | N/A | N/A |
| Analysis | Isobutylene | OK |
| Analysis | Toluene | OK |

**The instrument passed final tests.**

*This certificate was created by an automatic calibration and inspection system and is valid without being signed.*

Issue date of certificate: 12/13/2021, 15:42:26

## Site Activity Log

| Time | Activity |
|---|---|
| 0700 | Site-wide safety meeting. |
| 0730 | Marshall Arendell calibrates PID; Zero cal. = 0.0ppm \| Span cal. = 100.1ppm (both passed). |
| 0800 | PID perimeter check. No hits. 06 Environmental begins shipping out dirt from excavation. No PID hits from dirt. |
| 0900 | PID perimeter check. No hits. Joined Q1 2022 STL Field Staffing call. Keller resumes constructing crane. |
| 1000 | PID perimeter check. No hits. Pulled SKC sampled and stored them in freezer in ERM trailer. |
| 1015 | Marshall Arendell starts swapping out batteries. Reset Met Tower and restarted all SAM's |
| 1100 | Finished swapping out batteries. PID perimeter check. No hits. Badger moved truck to Neil St. & continued work. |
| 1200 | PID perimeter check. No hits. 06 Environmental continues to ship dirt from excavation offsite. No PID hits from dirt. |
| 1300 | PID perimeter check. No hits. Filled out CoC for SKC sample set. Keller continues constructing crane. |
| 1400 | PID perimeter check. No hits. 06 Environmental continues to ship dirt from excavation offsite. No PID hits from dirt. |
| 1500 | PID perimeter check. No hits. Marshall Arendell checks SKC pump flow – all are approx. 2.00. |
| 1600 | PID perimeter check. No hits. Keller continues constructing crane. 06 Environmental offsite. |
| 1630 | Keller begin to back up and move crane off 5th Street. |
| 1700 | All ERM personal offsite. |
| | |

## Site Activity Log

| Time | Activity |
|---|---|
| 0630 | ERM, Keller & 06 Environmental onsite for site-wide H&S tailgate meeting. |
| 0700 | PID perimeter check – no hits. Badger onsite @ 0730. |
| 0800 | PID perimeter check – no hits. 06 Environmental prepare to set up safety fence where necessary. |
| 0900 | PID perimeter check – no hits. |
| 0930 | Marshall and Paul w/ERM check out Church St. houses for water damage in basement/ outside |
| 1000 | Check SAM DustTrak flows – calibrated SAM # 1, 3, 4 & 5 |
| 1030 | PID perimeter check – no hits. |
| 1100 | Remove VOC samples from SKC pumps. Unplugged SKC pumps from all SAM locations. |
| 1200 | PID perimeter check – no hits. |
| 1300 | Marshall in a meeting for Westlake. |
| 1400 | PID perimeter check – no hits. Begin swapping batteries out for SAM # 2, 4, & 5. |
| 1500 | PID perimeter check – no hits. |
| 1700 | All personnel offsite. |

## Site Activity Log

| Time | Activity |
|---|---|
| 0630 | ERM, Keller & 06 Environmental onsite for site-wide H&S tailgate meeting. |
| 0725 | Calibration for PID = 90.1 & PID perimeter check – no hits. |
| 0830 | PID perimeter check – no hits. Took site pictures of SAM location/ condition (all in good condition). |
| 0900 | Plug in SKC pumps, checked flow (calibrated SAM # 1) & install new PUF samples into all SAMs. |
| 0930 | Swap out batteries for SAM # 2, 4, & 5. Check DustTrak flow for all SAMs (calibrated SAM # 4). |
| 1030 | PID perimeter check – no hits. Keller/06 began moving crane into position. |
| 1130 | PID perimeter check – no hits. Keller/06 continue to remove scrap from hole near SAM # 4. |
| 1230 | PID perimeter check – no hits. |
| 1330 | PID perimeter check – no hits. Marshall checks Church Str. Houses (no damage/ corrugated pipes in place). |
| 1400 | Marshall in a meeting. |
| 1500 | PID perimeter check – no hits. Fill out COC for PUF samples. |
| 1600 | PID perimeter check – no hits. |
| 1630 | Marshall offsite to ship PUF samples. |
| 1700 | All personnel offsite. |

## Site Activity Log

| Time | Activity |
|---|---|
| 0630 | ERM and 06 Environmental onsite for site-wide Health & Safety tailgate meeting. |
| 0700 | Weather update and perform PID check – no hits. Light hydrocarbon-like odor throughout site. |
| 0800 | Weather update and perform PID check – no hits. Light hydrocarbon-like odor throughout site. |
| 0900 | Weather update and perform PID check – no hits. |
| 1000 | Weather update and perform PID check – no hits. Light hydrocarbon-like odor throughout site. |
| 1100 | Weather update and perform PID check – no hits. Light hydrocarbon-like odor throughout site. |
| 1140 | Checked SAM DustTrak & SKC Pump flows and installed SKC PUF samples in all SAM locations. |
| 1215 | Weather update and perform PID check – no hits. Light hydrocarbon-like odor throughout site. |
| 1345 | Weather update and perform PID check – no hits. Light hydrocarbon-like odor throughout site. |
| 1415 | Removed DustTrak filter samples and installed blank samples in all SAM DustTrak locations. |
| 1427 | 75% exceedance reached on SAM#1 DustTrak due to kinking of air hose while closing DustTrak lid (false alarm). |
| 1440 | Re-measured DustTrak flow in all SAM locations after removing DustTrak filters. |
| 1500 | Weather update and perform PID check – no hits. Light hydrocarbon-like odor throughout site. |
| 1600 | Weather update and perform PID check – no hits. Light hydrocarbon-like odor throughout site. |
| 1630 | Packed up cooler for SKC PUF samples and DustTrak filter samples from all SAM locations. Marshall Arendell offsite. |
| 1700 | All personnel offsite. |

## Site Activity Log

| Time | Activity |
|---|---|
| 0630 | ERM & 06 Environmental onsite for site-wide Health & Safety tailgate meeting. |
| 0700 | ERM performed bump test on PID (passed) and checked perimeter of site with PID – no hits. No longer any hydrocarbon-like odor. |
| 0800 | Weather log update and PID perimeter check – no hits. |
| 0900 | Weather log update and PID perimeter check – no hits. |
| 1000 | Checked DustTrak flow at each SAM location and calibrated as necessary. Slight hydrocarbon-like odor throughout site. |
| 1045 | Weather log update and PID perimeter check – no hits. |
| 1145 | Marshall offsite to pick up new DustTrak machines & passive samples. |
| 1215 | Marshall back onsite. |
| 1330 | Weather log update and PID perimeter check – no hits. Slight hydrocarbon-like odor around NE edge of hole. |
| 1420 | Applied impactor oil to every DustTrak at each SAM locations. |
| 1445 | Weather log update and PID perimeter check – no hits. |
| 1540 | Swapped out DustTraks at SAM locations # 2 & 5. Tested and reapplied impactor oil to new sample inlet. Both new DustTraks operational. Rechecked flow and calibrated as necessary. |
| 1700 | All personnel offsite for the day. |

**Note:** This form is to be completed hourly during field activities.

- Wind Direction is the direction from which the wind is coming from.

## Site Activity Log

| Time | Activity |
|---|---|
| 0630 | ERM & 06 Environmental onsite for site-wide Health & Safety tailgate meeting. |
| 0745 | Dust kicked up from cleaning road for trucks delivering CA6 and stone. |
| 0915 | Removed SKC PUF samples, checking SKC pump flow and installing new SKC PUF samples in all SAM locations. Calibrated SKC pump flow as necessary. |
| 1000 | Checked DustTrak flows at each SAM location and calibrated as necessary. Slight hydrocarbon-like odor through the site – strongest near the excavation. |
| 1030 | Removed passive samples and installed new passive samples in all SAM locations. |
| 1200 | Weather update and PID perimeter check – no hits. |
| 1300 | Weather update and PID perimeter check – no hits. |
| 1350 | Filled out chains & excel logs for the day. Packed up old DustTrak modules from SAM #2 & 5, passive samples & SKC PUF samples. |
| 1500 | Weather update and PID perimeter check – no hits. |
| 1545 | Marshall offsite to drop off all samples and old DustTrak modules. |
| 1620 | Marshall onsite. |
| 1645 | ERM & 06 have end of day meeting – same process for 06 tomorrow. |
| 1700 | All personnel offsite. |

**Note:** This form is to be completed hourly during field activities.

## Site Activity Log

| Time | Activity |
|---|---|
| 0630 | ERM & 06 Environmental onsite for site-wide Health & Safety tailgate meeting. |
| 0650 | Perform bump test on PID – test passed. |
| 0700 | Weather update and PID perimeter check – no hits/ odor. |
| 0815 | Weather update and PID perimeter check – no hits/ odor. |
| 0930 | Weather update and PID perimeter check – no hits/ odor. |
| 1000 | Removed & installed VOC PUF samples at all SAM locations. Checked SKC pump and DustTrak flows and calibrated as necessary at all SAM locations. |
| 1115 | Weather update and PID perimeter check – no hits. Slight hydrocarbon-like odor near excavation. Dust visible when moving surge, CA6 and other materials around. |
| 1215 | Weather update and PID perimeter check – no hits. Slight hydrocarbon-like odor near excavation. |
| 1330 | Weather update and PID perimeter check – no hits. Slight hydrocarbon-like odor near excavation. Visible dust from moving materials around present. |
| 1430 | Weather update and PID perimeter check – no hits. Slight hydrocarbon-like odor throughout site. |
| 1600 | Weather update and PID perimeter check – no hits. Slight hydrocarbon-like odor near excavation. |
| 1630 | Packed up and prepared cooler for PUF samples to be shipped via FedEx |
| 1700 | All personnel offsite. |

Twice Daily Quality Site Check Form

| Date: 12/27/2021 | Technician Name: Joshua Richards | Site: Ameren 5th Street - Champaign, IL |
|---|---|---|

| Site Name | Time (CST) | Current VOC Concentration (ppm) | Odor Present? (Y/N) | Comments (Describe odor, if detected) |
|---|---|---|---|---|
| SAM-1 | 1609 | 0.1 | N | Told 1.5 - 2 mins per location if reading 0.0 ppm |
| SAM-2 | 1606 | 0.1 | N | Strong west wind blowing in background readings from offsite |
| SAM-3 | 1612 | 0.1 | N | NA |
| SAM-4 | 1615 | 0.1 | N | NA |
| IMPL-A | 1600 | 0.1 | N | NA |
| IMPL-B | 1601 | 0.1 | N | NA |
| IMPL-C | 1602 | 0.1 | N | NA |
| IMPL-D | 1603 | 0.1 | N | NA |
| IMPL-E | 1604 | 0.1 | N | NA |
| IMPL-F | 1607 | 0.1 | N | NA |
| IMPL-G | 1608 | 0.1 | N | NA |
| IMPL-H | 1610 | 0.1 | N | NA |
| IMPL-I | 1613 | 0.1 | N | NA |
| IMPL-J | 1614 | 0.1 | N | NA |
| IMPL-K | 1617 | 0.1 | N | NA |
| IMPL-L | 1620 | 0.1 | N | Consistent 0.1 ppm due to open manhole for bypass and strong west wind. |

| Safety Observation/Suggestion: | Trashy odor like someone is burning trash |
|---|---|

At the end of the day:

1. Document site visit in site log
2. Scan all forms associated with site check acitvities and the site log into site laptop memory
3. Note any supplies needed
4. Confirm all analyzers are in "operate" mode

After site check, distribute form to ERM project team: ERM.NorthernDivisionAirMonitoring@erm.com within **24 hours** of site check.

|---|---|

At the end of the day:

1. Document site visit in site log
2. Scan all forms associated with site check acitvities and the site log into site laptop memory
3. Note any supplies needed
4. Confirm all analyzers are in "operate" mode

After site check, distribute form to ERM project team: ERM.NorthernDivisionAirMonitoring@erm.com within **24 hours** of site check.

| **Safety Observation/Suggestion:** | |
|---|---|

At the end of the day:

1. Document site visit in site log
2. Scan all forms associated with site check acitvities and the site log into site laptop memory
3. Note any supplies needed
4. Confirm all analyzers are in "operate" mode

After site check, distribute form to ERM project team: ERM.NorthernDivisionAirMonitoring@erm.com within **24 hours** of site check.

# PID & GC Readings

| Date: 01/17/2022 | Technician Name: Joshua Richards | Site: Ameren 5th Street - Champaign, IL |
|---|---|---|

**If the handheld PID reading is ≥0.5 ppm for more than 1 min, bring out the Drager Gas Chromatagraph (GC) to that site location that had the high VOC reading to monitor for Benzene. If Benzene is detected, contact someone from the Rolling Meadows Air Team.**

| **Safety Observation/Suggestion:** | |
|---|---|

At the end of the day:

1. Document site visit in site log
2. Scan all forms associated with site check acitvities and the site log into site laptop memory
3. Note any supplies needed
4. Confirm all analyzers are in "operate" mode

After site check, distribute form to ERM project team: ERM.NorthernDivisionAirMonitoring@erm.com within **24 hours** of site check.

# PID & GC Readings

| Date: 01/18/2022 | Technician Name: Joshua Richards | Site: Ameren 5th Street - Champaign, IL |
|---|---|---|

**If the handheld PID reading is ≥0.5 ppm for more than 1 min, bring out the Drager Gas Chromatagraph (GC) to that site location that had the high VOC reading to monitor for Benzene. If Benzene is detected, contact someone from the Rolling Meadows Air Team.**

| Daily PID Bump Test | |
|---|---|
| Tank Concentration (ppm) | 100 |
| Bump Test Concentration (ppm) | 100 |

4. Confirm all analyzers are in "operate" mode

After site check, distribute form to ERM project team: ERM.NorthernDivisionAirMonitoring@erm.com within **24 hours** of site check.

# PID & GC Readings

| Date: 01/19/2022 | Technician Name: Joshua Richards | Site: Ameren 5th Street - Champaign, IL |
|---|---|---|

**If the handheld PID reading is ≥0.5 ppm for more than 1 min, bring out the Drager Gas Chromatagraph (GC) to that site location that had the high VOC reading to monitor for Benzene. If Benzene is detected, contact someone from the Rolling Meadows Air Team.**

| Daily PID Bump Test | |
|---|---|
| Tank Concentration (ppm) | 100 |
| Bump Test Concentration (ppm) | 100 |

| GC Bump Test (if GC is required) | |
|---|---|
| Tank Concentration (ppm) | NA |
| Bump Test Concentration (ppm) | NA |

| PID Readings | | | | | Drager GC (only if VOC ≥0.5 ppm) | | |
|---|---|---|---|---|---|---|---|
| Site Name | Time (CST) | Average VOC Concentration (ppm) | Odor Present? (Y/N) | Comments (Describe odor, if detected) | Benzene Concentration (ppm) | Benzne Concentration upwind (ppm) | Comments (Describe odor, if detected) |
| SAM-1 | 1407 | 0.0 | N | NA | NA | NA | NA |
| SAM-2 | 1401 | 0.0 | N | NA | NA | NA | NA |
| SAM-4 | 1416 | 0.0 | N | NA | NA | NA | NA |
| SAM-5 | 1411 | 0.0 | N | NA | NA | NA | NA |

| **Safety Observation/Suggestion:** | |
|---|---|

At the end of the day:

1. Document site visit in site log
2. Scan all forms associated with site check acitvities and the site log into site laptop memory
3. Note any supplies needed
4. Confirm all analyzers are in "operate" mode

After site check, distribute form to ERM project team: ERM.NorthernDivisionAirMonitoring@erm.com within **24 hours** of site check.

# PID & GC Readings

| Date: 01/20/2022 | Technician Name: Joshua Richards | Site: Ameren 5th Street - Champaign, IL |
|---|---|---|

**If the handheld PID reading is ≥0.5 ppm for more than 1 min, bring out the Drager Gas Chromatagraph (GC) to that site location that had the high VOC reading to monitor for Benzene. If Benzene is detected, contact someone from the Rolling Meadows Air Team.**

| Daily PID Bump Test | |
|---|---|
| Tank Concentration (ppm) | 100 |
| Bump Test Concentration (ppm) | 100 |

| GC Bump Test (if GC is required) | |

| **Safety Observation/Suggestion:** | |
|---|---|

At the end of the day:

1. Document site visit in site log
2. Scan all forms associated with site check acitvities and the site log into site laptop memory
3. Note any supplies needed
4. Confirm all analyzers are in "operate" mode

After site check, distribute form to ERM project team: ERM.NorthernDivisionAirMonitoring@erm.com within **24 hours** of site check.

# PID & GC Readings

| Date: 01/21/2022 | Technician Name: Joshua Richards | Site: Ameren 5th Street - Champaign, IL |
|---|---|---|

**If the handheld PID reading is ≥0.5 ppm for more than 1 min, bring out the Drager Gas Chromatagraph (GC) to that site location that had the high VOC reading to monitor for Benzene. If Benzene is detected, contact someone from the Rolling Meadows Air Team.**

| Daily PID Bump Test | |
|---|---|
| Tank Concentration (ppm) | 100 |
| Bump Test Concentration (ppm) | 100 |

| **Safety Observation/Suggestion:** | |
|---|---|

At the end of the day:

1. Document site visit in site log
2. Scan all forms associated with site check acitvities and the site log into site laptop memory
3. Note any supplies needed
4. Confirm all analyzers are in "operate" mode

After site check, distribute form to ERM project team: ERM.NorthernDivisionAirMonitoring@erm.com within **24 hours** of site check.

| **Safety Observation/Suggestion:** | |
|---|---|

At the end of the day:

1. Document site visit in site log
2. Scan all forms associated with site check acitvities and the site log into site laptop memory
3. Note any supplies needed
4. Confirm all analyzers are in "operate" mode

After site check, distribute form to ERM project team: ERM.NorthernDivisionAirMonitoring@erm.com within **24 hours** of site check.

# PID & GC Readings

| Date: 01/25/2022 | Technician Name: Joshua Richards | Site: Ameren 5th Street - Champaign, IL |
|---|---|---|

**If the handheld PID reading is ≥0.5 ppm for more than 1 min, bring out the Drager Gas Chromatagraph (GC) to that site location that had the high VOC reading to monitor for Benzene. If Benzene is detected, contact someone from the Rolling Meadows Air Team.**

| **Safety Observation/Suggestion:** | |
|---|---|

At the end of the day:

1. Document site visit in site log
2. Scan all forms associated with site check acitvities and the site log into site laptop memory
3. Note any supplies needed
4. Confirm all analyzers are in "operate" mode

After site check, distribute form to ERM project team: ERM.NorthernDivisionAirMonitoring@erm.com within **24 hours** of site check.

# PID & GC Readings

| Date: 01/26/2022 | Technician Name: Joshua Richards | Site: Ameren 5th Street - Champaign, IL |
|---|---|---|

**If the handheld PID reading is ≥0.5 ppm for more than 1 min, bring out the Drager Gas Chromatagraph (GC) to that site location that had the high VOC reading to monitor for Benzene. If Benzene is detected, contact someone from the Rolling Meadows Air Team.**

| Daily PID Bump Test | |
|---|---|
| Tank Concentration (ppm) | 100 |
| Bump Test Concentration (ppm) | 100 |

| **Safety Observation/Suggestion:** | |
|---|---|

At the end of the day:

1. Document site visit in site log
2. Scan all forms associated with site check acitvities and the site log into site laptop memory
3. Note any supplies needed
4. Confirm all analyzers are in "operate" mode

After site check, distribute form to ERM project team: ERM.NorthernDivisionAirMonitoring@erm.com within **24 hours** of site check.

# PID & GC Readings

| Date: 01/28/2022 | Technician Name: Joshua Richards | Site: Ameren 5th Street - Champaign, IL |
|---|---|---|

**If the handheld PID reading is ≥0.5 ppm for more than 1 min, bring out the Drager Gas Chromatagraph (GC) to that site location that had the high VOC reading to monitor for Benzene. If Benzene is detected, contact someone from the Rolling Meadows Air Team.**

| Daily PID Bump Test | |
|---|---|
| Tank Concentration (ppm) | 100 |
| Bump Test Concentration (ppm) | 100 |

| **Safety Observation/Suggestion:** | |
|---|---|

At the end of the day:

1. Document site visit in site log
2. Scan all forms associated with site check acitvities and the site log into site laptop memory
3. Note any supplies needed
4. Confirm all analyzers are in "operate" mode

After site check, distribute form to ERM project team: ERM.NorthernDivisionAirMonitoring@erm.com within **24 hours** of site check.

# PID & GC Readings

| Date: 01/31/2022 | Technician Name: Joshua Richards | Site: Ameren 5th Street - Champaign, IL |
|---|---|---|

**If the handheld PID reading is ≥0.5 ppm for more than 1 min, bring out the Drager Gas Chromatagraph (GC) to that site location that had the high VOC reading to monitor for Benzene. If Benzene is detected, contact someone from the Rolling Meadows Air Team.**

| **Safety Observation/Suggestion:** | |
|---|---|

At the end of the day:

1. Document site visit in site log
2. Scan all forms associated with site check acitvities and the site log into site laptop memory
3. Note any supplies needed
4. Confirm all analyzers are in "operate" mode

After site check, distribute form to ERM project team: ERM.NorthernDivisionAirMonitoring@erm.com within **24 hours** of site check.

# PID & GC Readings

| Date: 02/01/2022 | Technician Name: Joshua Richards | Site: Ameren 5th Street - Champaign, IL |
|---|---|---|

**If the handheld PID reading is ≥0.5 ppm for more than 1 min, bring out the Drager Gas Chromatagraph (GC) to that site location that had the high VOC reading to monitor for Benzene. If Benzene is detected, contact someone from the Rolling Meadows Air Team.**

| Daily PID Bump Test | |
|---|---|
| Tank Concentration (ppm) | 100 |
| Bump Test Concentration (ppm) | 100 |

| **Safety Observation/Suggestion:** | No PID recordings for today due to weather. Snow is heaving and covering over the entire site. No onsite activities except partial road clearing. |
|---|---|

At the end of the day:

1. Document site visit in site log
2. Scan all forms associated with site check acitvities and the site log into site laptop memory
3. Note any supplies needed
4. Confirm all analyzers are in "operate" mode

After site check, distribute form to ERM project team: ERM.NorthernDivisionAirMonitoring@erm.com within **24 hours** of site check.

| IMPL-G | Not Recorded | Not Recorded | Not Recorded | Not Recorded | Not Recorded | Not Recorded | Not Recorded |
| IMPL-H | Not Recorded | Not Recorded | Not Recorded | Not Recorded | Not Recorded | Not Recorded | Not Recorded |
| IMPL-I | Not Recorded | Not Recorded | Not Recorded | Not Recorded | Not Recorded | Not Recorded | Not Recorded |
| IMPL-J | Not Recorded | Not Recorded | Not Recorded | Not Recorded | Not Recorded | Not Recorded | Not Recorded |
| IMPL-K | Not Recorded | Not Recorded | Not Recorded | Not Recorded | Not Recorded | Not Recorded | Not Recorded |
| IMPL-L | Not Recorded | Not Recorded | Not Recorded | Not Recorded | Not Recorded | Not Recorded | Not Recorded |

| **Safety Observation/Suggestion:** | No PID recordings for today due to weather. Snow is heaving and covering over the entire site. No onsite activities except partial road clearing. |
|---|---|

At the end of the day:

1. Document site visit in site log
2. Scan all forms associated with site check acitvities and the site log into site laptop memory
3. Note any supplies needed
4. Confirm all analyzers are in "operate" mode

After site check, distribute form to ERM project team: ERM.NorthernDivisionAirMonitoring@erm.com within **24 hours** of site check.

# PID & GC Readings

| Date: 02/03/2022 | Technician Name: Joshua Richards | Site: Ameren 5th Street - Champaign, IL |
|---|---|---|

**If the handheld PID reading is ≥0.5 ppm for more than 1 min, bring out the Drager Gas Chromatagraph (GC) to that site location that had the high VOC reading to monitor for Benzene. If Benzene is detected, contact someone from the Rolling Meadows Air Team.**

| Daily PID Bump Test | |
|---|---|
| Tank Concentration (ppm) | 100 |
| Bump Test Concentration (ppm) | 100 |

| GC Bump Test (if GC is required) | |
|---|---|
| Tank Concentration (ppm) | NA |
| Bump Test Concentration (ppm) | NA |
