

Energy Efficiency  
PROGRAM

# Spring Into Savings

The days are getting longer and it's time to prepare your home for the upcoming season. Try these simple tips to save on your energy bill.

Change your fans to rotate counterclockwise, which creates a downward flow of air, so you feel cooler.

Replace the AC filter before you start cooling your home.

Take advantage of the cool nights by opening the windows to let cool air in, but close them during the day to keep warm air out.
